## **TCS Digital Software & Solutions Group Introduces Smart City Accelerator Solution**

*TCS Intelligent Urban Exchange Solution Software Delivers Platform and Applications Designed to Advance Urban Growth, Speed Digital Transformation and Value to Citizens*

**NEW YORK | MUMBAI, September 22, 2015:** Tata Consultancy Services (BSE: 532540, NSE: TCS), a leading global IT services, consulting and business solutions organization, today announced its Digital Software & Solutions (DS&S) group has released 'Intelligent Urban Exchange (IUX)', a powerful analytics-based software solution for intelligent city operations to help address growing expectations of digitally connected, urban citizens.

According to Frost & Sullivan, the smart city market is likely to be worth \$1.5 trillion by 2020 and more than 60 percent of urban citizens will have full access to eServices in the next decade. With this heightened level of opportunity and citizen expectations, innovation and investment in intelligent city digital technologies and services will focus on improving public services and quality of life for urban citizens.

The IUX solution is a highly scalable, modular software that combines big data and domain specific advanced analytics to provide cities with real-time, actionable insights. In turn, it delivers cost-effective operations on a common platform across essential city domains, such as transportation, water, energy, and government operations.

The solution, which will be made available through strategic partnerships with the Digital Software & Solutions group, offers customized city data models for the accelerated deployment of smart city programs. It collects and analyzes data from multiple sources, including networks, sensors, social media, and open city data, and applies real-time analytics to deliver insights for city officials to help increase citizen satisfaction.

"We are pleased to already be engaging with key partners in intelligent city projects to bring TCS IUX into the market, improve operational efficiency and generate new revenue streams for cities that will directly benefit citizens' quality of life," said Seeta Hariharan, General Manager and Group Head of TCS' DS&S group. "Our strategic partners are already finding value with the solution to leverage data within and across domain specific applications and develop local apps that will accelerate smart city programs, provide a flexible platform to fuel future growth, and create a more enjoyable experience for urban dwellers."

The first available application on the TCS IUX solution is for transportation and delivers a comprehensive analytic application for city transport administrators and bus operators to improve ridership, service levels and fleet utilization. It includes real-time insight and trend analysis of passenger demand and service parameters, such as wait times, queue build-up, ridership, and revenue realization across various routes and schedules to create adaptive planning for more effective public transportation services. Future IUX applications will focus on urban utilities, such as Intelligent Water to promote conservation, and support partners to address issues in water loss, leakage and infrastructure upgrades to ensure safe and reliable delivery of water to communities.

**About TCS Digital Software & Solutions Group**

Launched in 2014, TCS Digital Software & Solutions Group is a strategic growth business unit in TCS formed to help customers undergo critical digital transformations with modular, scalable and fully integrated, industry-tailored licensed software and solutions. Industries served are Cities, Retail, Communications, and Banking and Financial Services, four markets with a particularly urgent need to adopt emerging technologies to enhance customer intelligence capabilities and rapidly shift product and service offerings to compete in highly competitive and customer-centric arenas.
