**Voltas Water Solutions combines Smart Engineering with Smart Water Science  
to launch Smart Water Solutions**

Voltas Water Solutions Private Limited (VWS) a 50:50 Joint Venture between Voltas Ltd. and Dow Chemical Pacific (Singapore) Pte. Ltd. (a member of the Dow Group of Companies), has recently announced its commitment to take the lead in serving the growing water and wastewater treatment needs of the country. In line with this endeavour, VWS has launched new products of up to 20 cubic metres (20,000 litres) per hour, including **packaged RO water purifiers, skid-mounted water treatment systems and packaged sewage treatment plants**. These products are part of VWS's effort to provide pure drinking water to people, clean water for process use in industries, and promote recycling of wastewater by bringing together Voltas' 'smart' engineering and marketing strengths, with the Dow Group's smart water science.

The new VWS products are space and cost-efficient and distinguished by a 'Smart Monitoring' feature that helps users to stay connected with the product. Users can monitor the system from any location, using the Voltas Water Smart Monitoring App, and through web access from PCs or tablets. VWS products provide real-time data of daily operations, and make servicing much easier. A further edge is the use of FILMTEC™ RO elements, that provide 20% higher flow rate and have lower lifetime costs.

#### PRODUCT DETAILS

##### Water ATM

The Water ATM is a conveniently located coin or smart card-operated dispenser that can serve pure and safe drinking water, at a mere 10-20 paisa per litre. It aims to relieve men and women from spending hours daily in fetching water, often from ground-water sources which are contaminated, spreading water-borne diseases. The Water ATM can be put in place by a local entrepreneur or through a sponsorship model, and the low operating cost makes it self-sustainable. With its distinctive features – 8 stages of filtration including reverse osmosis, and reduction of bacteria and virus by 99.99% – Voltas Water ATM is a safe, durable and secure source of purified drinking water for communities and public places.

##### GET.SET.RO

The GET.SET.RO. range by VWS is one of the safest ways of obtaining purified drinking water, and is ideal for offices, schools/colleges and urban infrastructure. It is characterised by high recovery of water through FILMTEC™ RO elements that results in low wastage as compared to home water purifiers, making it a much more efficient and eco-friendly solution. GET.SET.RO is intelligently designed to function in all weather, maintaining its rate of flow even in winter.

##### Sewage Treatment Plants (STPs)

Every STP is optimally designed to provide an economical solution for reuse of water. These plug-and-play systems are engineered with stringent physical, chemical and biological standards in mind, in order to obtain a water of a quality suitable for reuse for gardening, cleaning and washing. Features include compact design and durability, easy installations, economy and energy efficiency, and absence of odour.
