Global economy

GDP growth - 2015 estimates and 2016 projections by IMF

- Global economic outlook remains fragile, IMF revises down 2016 global GDP growth yet again to 3.4%.
- Downside risk persists with 1) slowdown and rebalancing in China, 2) global trade imbalances driven by a sharp drop in commodity prices as well as weakening currencies, 3) limited room for further monetary stimulus, and 4) uncertainty around monetray tightening by US

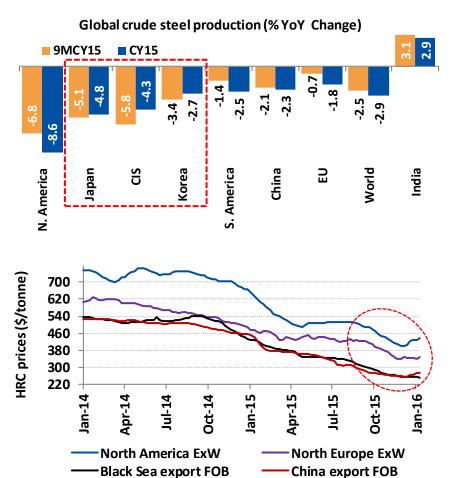

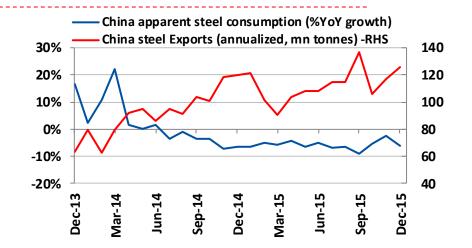

Expectations of a pick-up in global growth momentum is waning

Global steel scenario

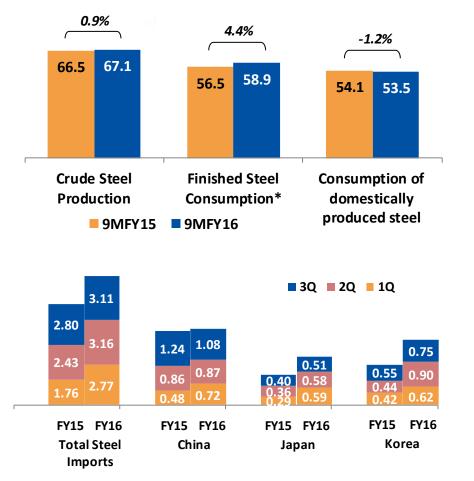

- World Crude Steel production in CY2015 fell by 2.9%, as capacity utilization in Dec'15 dropped below 65% – most regions continue to witness a decline
- Global steel demand continues to weaken with lower investment activities
- Steel exports from steel-surplus countries (as domestic demand falls faster than production cuts) are at elevated levels

Predatory pricing is intensifying trade measures to check surging imports and pricing pressure

Indian economy and steel industry

- Consumption of domestically produced steel fell by 1.2%YoY in 9MFY16 as total steel imports surged by 29%YoY
- 9MFY16 Finished steel exports fell by 30%YoY.
- Steel industry is grappling with headwinds of insipid demand, excess supply and pricing pressure driven by surge in imports at predatory pricing
- Consumer discretionary spending, public capex (highways, ports, power transmission, etc.) and foreign direct investment have continued to improve, supporting a gradual growth recovery
- However, weaker exports and private capex have been a drag
- Progress on policy reforms coupled with government's measures to pump prime the economy bode well for steel demand over the medium term

Adequate measures urgently required to check unbridled and unfair imports of steel

Source: JPC and JSW Steel All figures are in million tonnes, * Apparent finished steel consumption net of double counting effect
