NEWS RELEASE

Nucleus Software launches 'mApply', an innovative Mobile solution that enables Australian consumers to apply for loans in minutes

- Offers drastic reduction in "Time to Yes" and cost of customer acquisition
- Acts as the convenient last mile connect for completely digitized loan origination
- Enables acquisition of new customers through Mobile channel
- Provides easy to scale, anytime anywhere business reach

Sydney, Australia, 1st June, 2016 — Nucleus Software, the leading provider of lending and transaction banking solutions to the global financial services industry, today announced the Australian release of its mobile loan self-sourcing solution – mApply at the Australian Retail Banking Summit 2016.

Bank customers in Australia are among the world's fastest adopters of mobile banking, which has now overtaken online banking as the primary channel for customer interaction¹. With more and more Australians less likely to visit a bank branch in the future, providing access to loan services over mobile has become a priority. This has created the need to use technology and digitize banking services for anytime, anywhere access, across the channels which customers want. Nucleus Software, recently recognized as one of the top 5 mobile banking solution providers globally by a leading analyst firm, now offers a solution to address this requirement.

mApply, the latest addition in Nucleus Software's portfolio of mobile solutions, helps banks digitize their loan origination lifecycle. mApply enables the bank's customers and mortgage brokers to view pre-approved loan offers from the bank, select the best offer and submit a paperless loan application within minutes. This process can be easily completed on mobile without any need to visit the bank branch. mApply helps customers track their loan application through the process from application to conditional and full approval. After customers have accepted the loan, they can use the same app to access repayment schedules, account statements and transaction reports on-the-go. With mApply, banks can easily enhance their business reach, cut down their time to market, cross sell new products and drastically reduce the cost of loan origination. Nucleus Software offers a comprehensive range of lending mobility solutions spanning across origination, servicing and collections. Nucleus Software's FinnOne, 10 time winner World's Best Selling Lending Solution, has recently gone live at Bank of Queensland.

Mr. Ravi Pratap Singh, Executive Director and President - Products, Nucleus Software said, "Australian banks are the front runners in adopting cutting edge technology to enhance customer experience and we feel that Australia is a perfect market for this innovative solution. Revolving around the theme of harnessing the global digital revolution, the Australian Retail Banking Summit is a great platform for us to showcase the value this solution brings to the entire banking community."
