Stone India forays into Solar Systems

Stone India Limited is executing its first Solar Power Plant. The initial order is for design, supply, installation and maintenance of the system using its indigenously developed unique, scalable "Nano-String Inverter". This configured system reduces the capital cost of such power plants by at least 15% with higher power harvesting capability compared to conventional existing Solar Plant solutions. This advanced balance of equipment product has been developed in its state of the art R&D Centre, which has been recognized by Ministry of Science & Technology, Government of India.

Such power plants have unique feature of running in hybrid conditions – grid-tied as well as off-grid and is targeted for urban & rural roof-top segments.

With this Stone India has now diversified its portfolio beyond Railway system & products into Metro EPC business, environment friendly bio-toilets for "Swachh Bharat Abhiyan" and Solar EPC Systems.
