Subex leads the Capital Asset Management Catalyst at TM Forum Live!

Catalyst to demonstrate a comprehensive, repeatable and scalable approach to understand and effectively manage all facets of network asset management

Bangalore, India – Subex Ltd, a leading global provider of Business and Operations Support Systems (B/OSS) for Communications Service Providers (CSPs), will be leading the Capital Asset Management catalyst that will be demonstrated at TM Forum Live! 2014, Nice, France at The Hub, Zone 2, 2.3. The goal of the project is to demonstrate a comprehensive, repeatable and scalable approach to understand and effectively manage all facets of network asset management.

Smarter network capital spending is now a critical need across operators. Effective, demonstrable programs around capital expenditure and network asset lifecycle management are rapidly becoming a boardroom level issue for telecoms operators. Implementing a comprehensive solution of Network Asset Management which manages, oversees, and predicts all facets of network capital expenditure is now required to provide management with the right actionable intelligence to make more informed and better capex decisions.

To explore more into the Asset Management space, Subex and other participating companies, along with TM Forum and Operator champion Econet have recently launched the Asset Management Project, to bring standards into the Network Capex and Network Optimization practices within operators globally. With multi-billion dollar network capex budgets across operators, and a multi-trillion dollar industry spend annually, the Asset Management project at TM Forum has turned attention to creating processes, controls, and ultimately program standards and recommendations to help optimize the biggest capital spend line item in every operator's budget today: *Network Investment*.

Press release

The Asset Management Group has been established for TM Forum members to collaborate in defining guidelines to set network asset policies, track assets and manage the overall corporate balance sheet.

“We are honoured to lead the TMForum Capital Asset Management catalyst and work with other participant companies to bring standards into the network capex practices within operators globally. The catalyst at Nice will include use cases on Procurement Gating, Decommission Management, Capital Management, Asset Tracker, Time to Value Monitoring amongst others,” said John Brooks, VP – Product Management at Subex.

The Asset Management project has created the first ever operator asset management survey to understand network capex planning and budgeting activities across different operators, managing different networks, across every region in the world today. The understanding, commonalities, differences, and challenges faced by operators will all be captured, and results and insights produced in a final analysis that should prove highly valuable to both Network and Finance organizations globally.
