Registered Office

Business Segments

SHRIMP FEEDS AND MEDICINE

SHRIMP FARMING

FROZEN SHRIMPS

Shrimp Feeds and Medicine

A quality proprietary mix of vitamins and other ingredients

The nutrient beads remain intact until eaten by the shrimp.

It is easy to adjust feeding to meet the actual needs of your shrimp

Shrimp Farming

Zeal Aqua uses the latest hi-tech methods and hygienic processes with HDPE Lined Pod.

We harvest and produce mainly Tiger Prawn and White Shrimp

These shrimps are exported to markets in Europe, UK, Africa, USA & Japan.

Shrimp freezing

A totally self-integrated aquaculture company to make products export ready in-house.

Methods used such as, Blast Freezing, Plate Freezing, IQF, Block Freezing

Processing Plant is close to close to the aquaculture plant to ensure Supply-chain efficiency.

FARM & LAB TEST

PRE-PROCESSING

PROCESSING & VALUE ADDITION

BLAST FREEZER

OVERVIEW OF FREEZING

1st Phase

The food is cooled from ambient temperature to freezing point by removing sensible heat.

2nd Phase

The phase transition heat of the food is removed by turning the water within it to ice.

3rd Phase

Cooling continues below the freezing point, which removes more sensible heat, reducing the temperature of the product to the desired or optimum frozen storage temperature.

Blast Freezing (Convection)

Cold air is circulated over the product at high velocity, removing heat from the product and releasing it to an air/refrigerant heat exchanger before being circulated.

Contact Freezing (Conduction)

Packaged or unpackaged products are placed on or between cold metal surfaces. The heat on the surface of the product is removed by the metal surfaces that are kept continuously cold by refrigerant circulating within them.

(Extremely Low Temperature) Freezing (Convection or Conduction)

Food is exposed to an environment below -60°C , which is achieved by spraying liquid CO_2 or liquid N_2 into the freezing chamber.

Cryomechanical

Food is first exposed to Cryogenic freezing and then finished frozen through mechanical refrigeration. Special freezing methods, such as immersion of poultry in chilled brine, are also available.

FREEZING METHODS

Freezing methods can be grouped by their basic method of extracting heat from food products

WHY CHOOSE BLAST FREEZER?

Versatility

- Blast freezers tend to be a good choice for products that are irregular in size and shape. Applications like plate freezers are not appropriate for such foods of irregular shape and size.
- This flexibility and versatility of blast freezers, while providing a significant advantage makes it difficult for the potential user to clearly ascertain what he wants, which easily leads to inefficient use afterwards.

Blast Freezers Types

Continuous (process line) freezers

The product moves continuously within the freezer during the process, which is called a continuous process line cooler. In the continuous freezer, the product is moved into the freezer by conveyors.

Batch freezers

The product is stationary within the freezer, which is called batch freezing.

Intermittent (half-batch) freezers

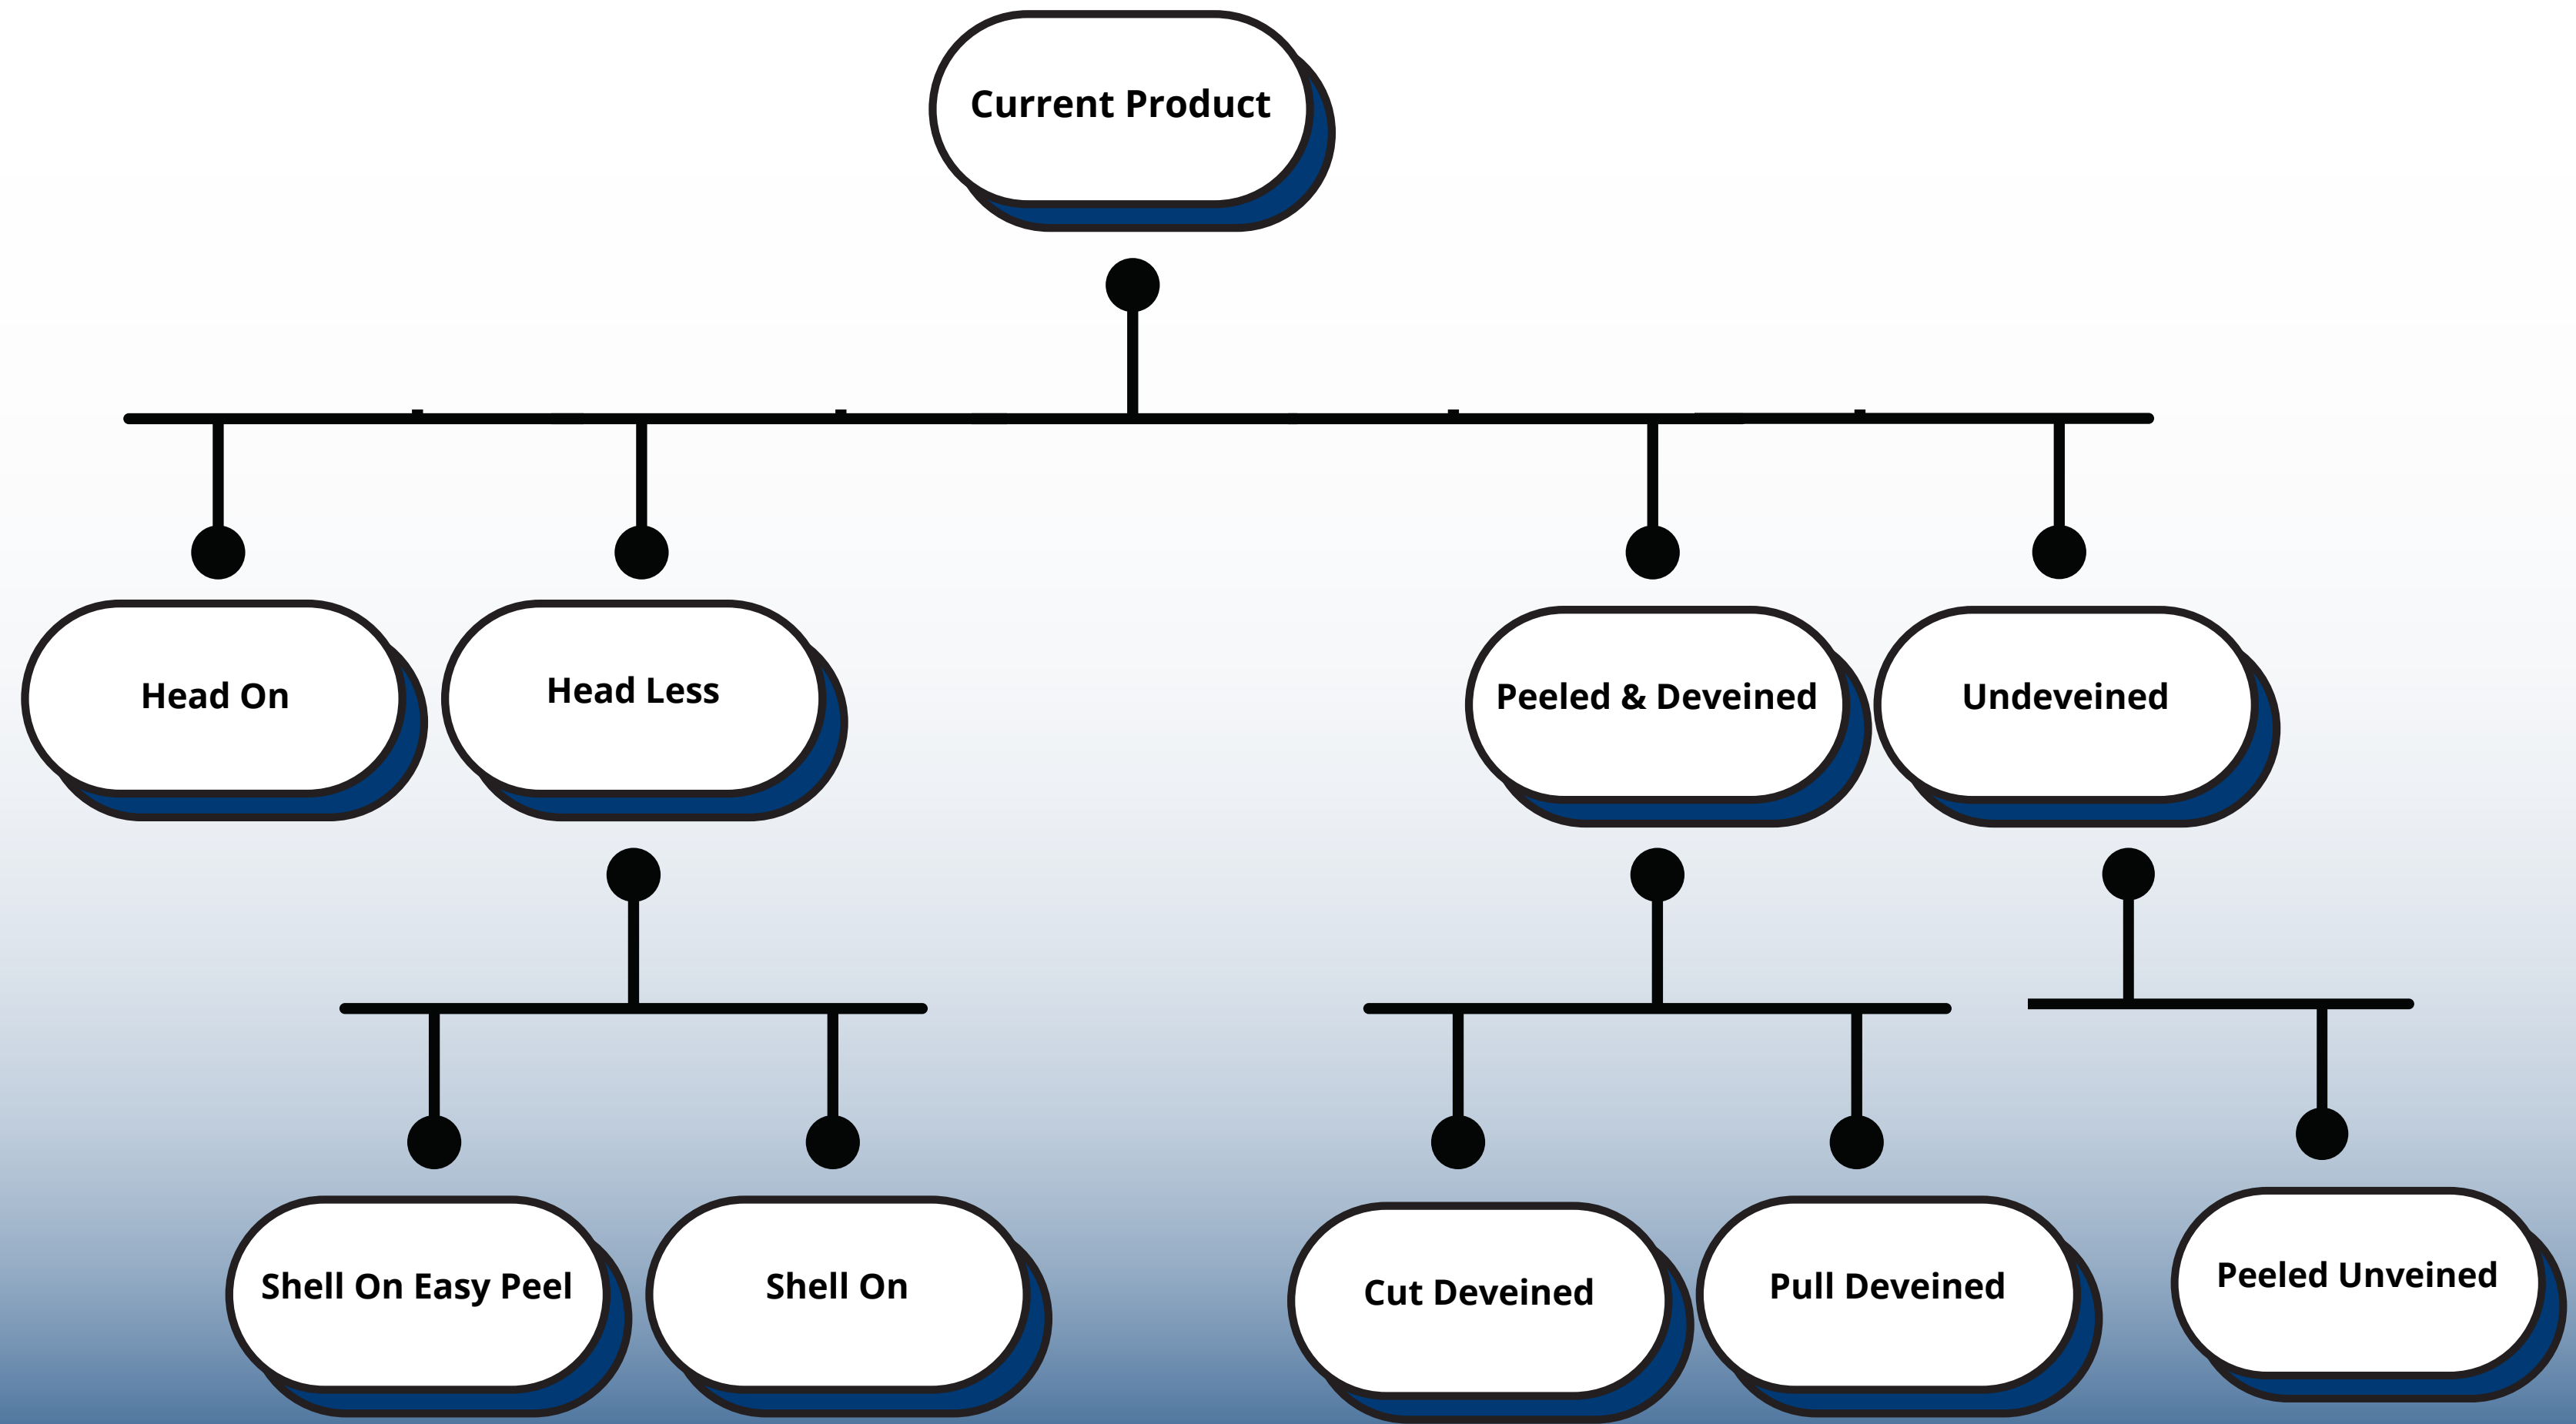

In the Push-Through Trolley Freezer, The system operates like a half/batch system when trolleys are used for moving the blast frozen product instead of conveyors.

Advantages:

- Increase Production Capacity
- Easy To Handle
- High Quality
- Adjust The Freezing Time
- Food Safety
- Multi-Type Of Frozen Foods
- Increase Export
- Energy Efficient

Product Diversification – Value Addition For Better Product Realization

CERTIFICATIONS

Future for Shrimp Market

Show the ways your company plans to make money.

The Global Shrimp Market is expected to grow at a promising CAGR of 9.5% during the projected period.

Consumers are going through a "nutrition transition" by switching from a carbohydrate diet to one that contains more proteins.

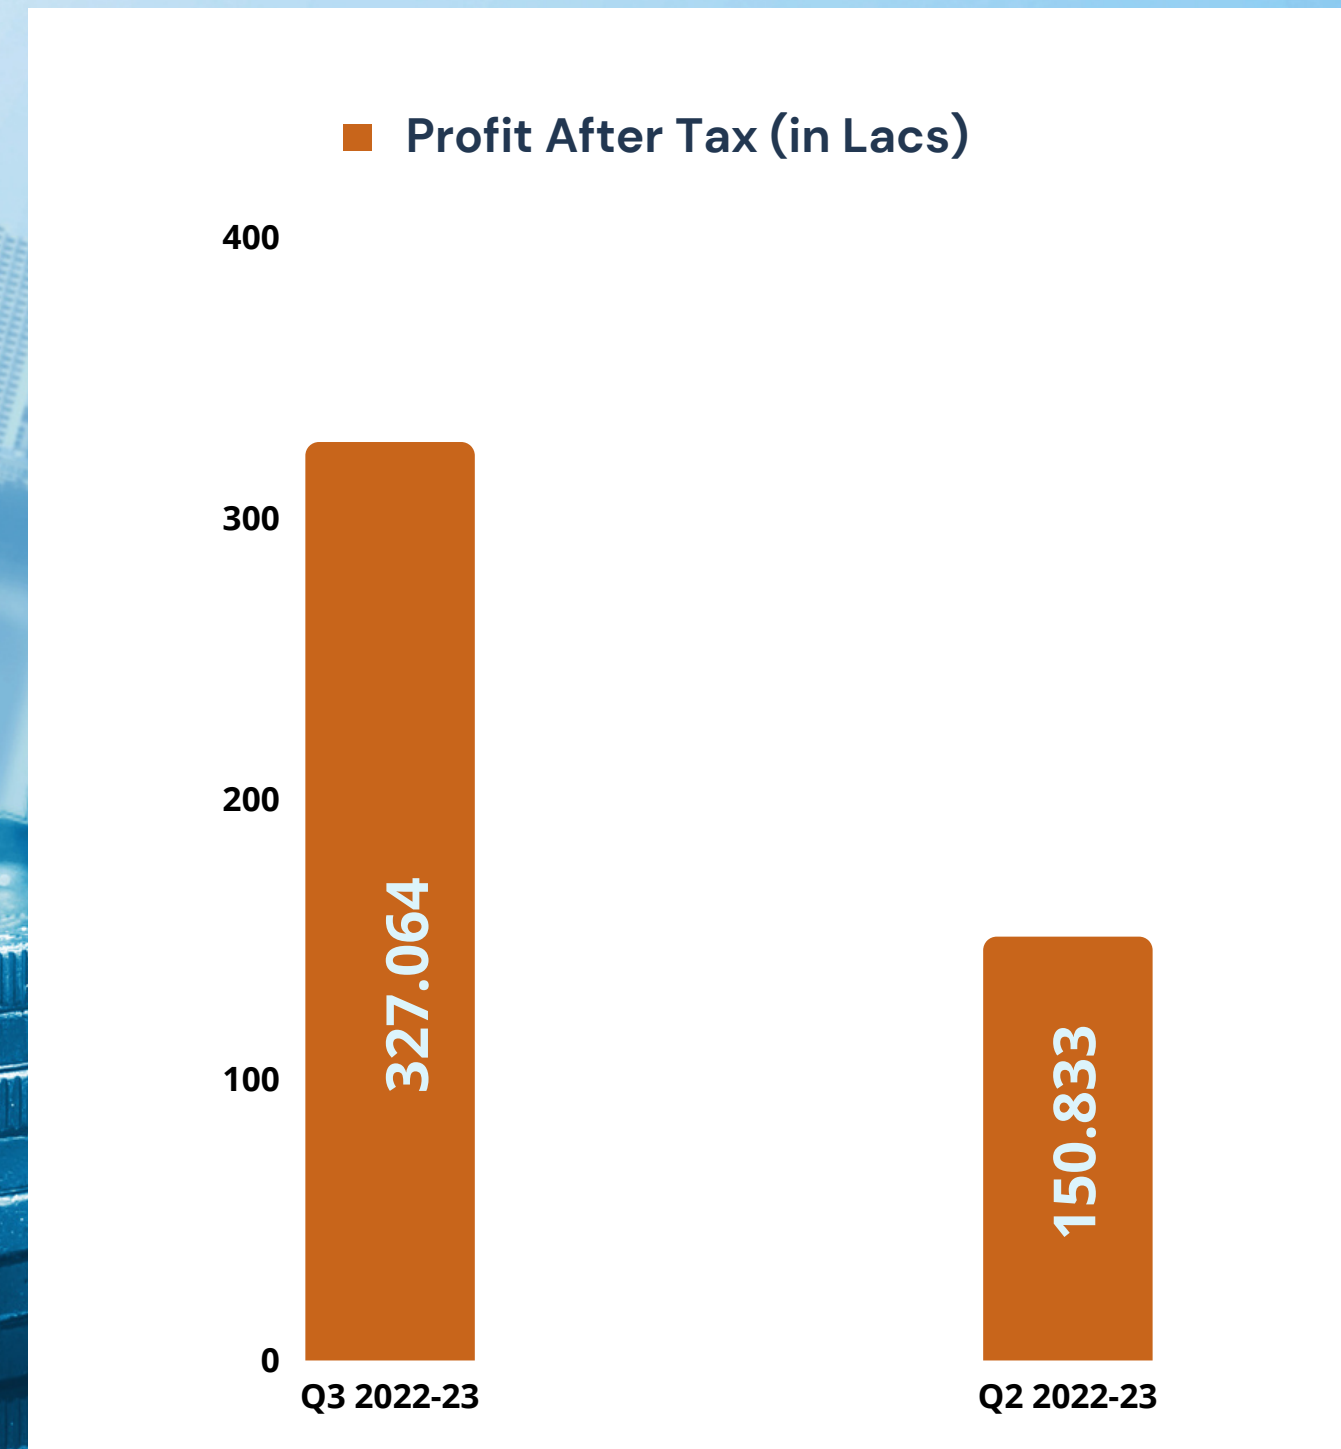

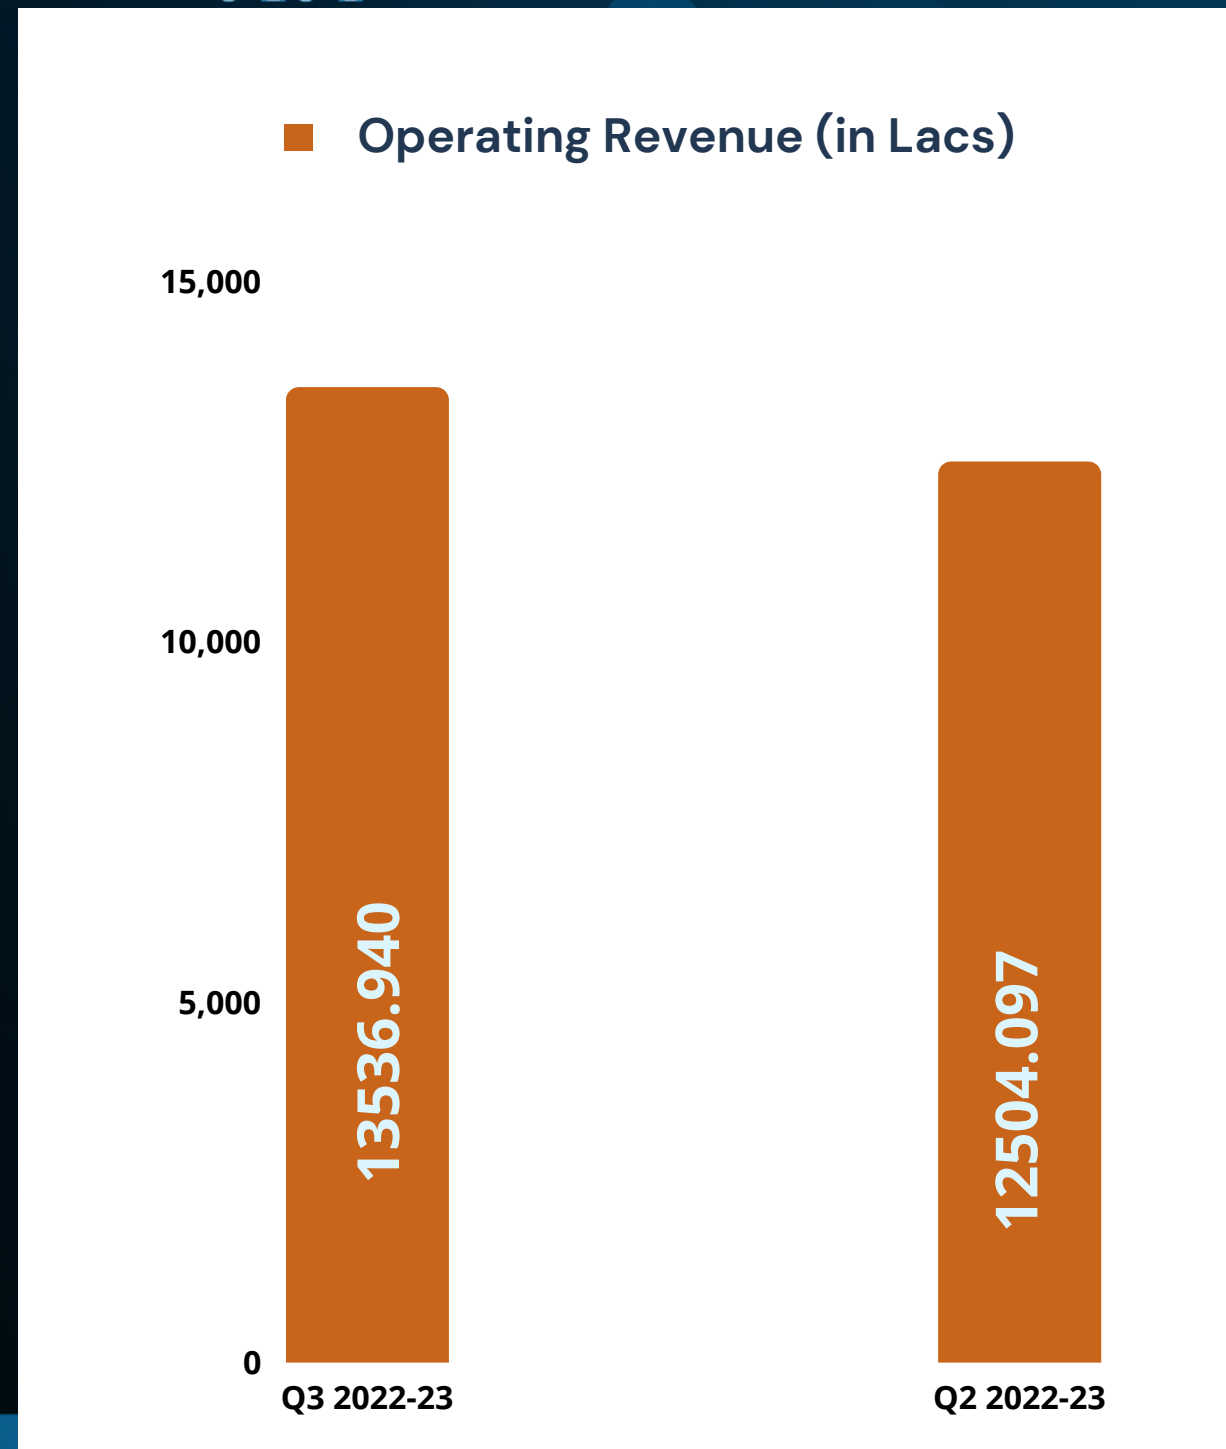

Since shrimps are a traditional dish in China, there has been a higher-than-average consumption of shrimp there.
