MANAGEMENT DISCUSSION AND ANALYSIS REPORT

MACRO ECONOMIC ENVIRONMENT

The year 2013-14 had been a year of slow growth world over and as per IMF forecast Global Economy is likely to show a growth of 3.3% during 2013 as compared to growth of 3.2% during 2012. The Global Economies witnessed a subdued growth with diverging growth paths across major economies. US economy which has registered a modest recovery is again subject to the adverse impact of the budget sequestration which will gradually gain pace during 2013. Japan's economy has shown signs of improvement on account of monetary and fiscal stimulus undertaken. The sovereign debt crises and the danger of a banking system meltdown in peripheral euro zone countries coupled with contraction in its major economies like Germany has resulted in negative growth in Euro zone. The growth in the Emerging Market Economies which are viewed as growth engines of the world economy world over have also slowed down with Brazil and South Africa registering accelerated growth where as Russia, China and India a lower growth. According to the Central Statistics Office's advance estimate of GDP growth, Indian Economy is expected to grow at 5% during the year 2013-14 as compared to a growth of 4.80% registered during 2012-13. This has been mainly on account of weak industrial activity compounded by domestic supply bottlenecks and slackening of external demand. This has also slowdown the growth in the service sector which has been the main driver of the growth.

The Reserve Bank of India in order to strike a balance in growth- inflation dynamics has initiated various measures during 2013-2014 to provide greater liquidity to financial system. This has resulted in moderating the headline inflation within its acceptable level. The food inflation as measured by new combined (rural and urban) consumer price index (CPI) remains in double digit is a cause of concern. The measures initiated are expected to result in moderate growth in GDP in the second half of 2013-2014.

1. INDUSTRY STRUCTURE AND DEVELOPMENTS

The last year (2013-2014) has been the most eventful period for the Indian securities market during which it took major strides to carve a niche for itself in the global securities markets. The major developments which hastened this incredible journey can broadly be observed under three categories, viz. improved market microstructure, introduction of new products and progressive changes in the regulatory framework.

2. OPPORTUNITY AND THREATS

Opportunities

The Indian money market is "a market for short-term and Long term funds with maturity ranging from overnight to one year and includes financial instruments that are deemed to be close substitutes of money. It is diversified and has evolved through many stages, from the conventional platform of treasury bills and call money to commercial paper, certificates of deposit, repos, FRAs and IRS more recently.

Supra Pacific Management Consultancy Ltd

The Indian money market consists of diverse sub-markets, each dealing in a particular type of short-term credit. The money market fulfills the borrowing and investment requirements of providers and users of short-term funds, and balances the demand for and supply of short term funds by providing an equilibrium mechanism.

In Stock Market or Capital Market, the first and foremost thing of strength is its ability to provide high return. SEBI is a regulatory body of Indian stock market which protects the interest of the investors which is an added benefit of Stock Market. Large number of securities which provides medium for investment and thus people can make money by way of investing wisely in Stock Market. Large numbers of Brokers are there in Market who plays a role of facilitator for investment.

Threats & Concerns

The Indian economy is caught between low growth and stubbornly high inflation. Last month, the International Monetary Fund (IMF) revised the year-over-year GDP growth forecast of India to 5.7 percent for 2014, down from its January estimate of 5.9 percent. The IMF attributed structural factors as the primary reasons for the poor performance, rather than the cyclical factors cited by the government last month. Additionally, the IMF expects consumer price inflation to remain at around 10 percent in 2014 due to a rise in food and fuel prices. Lately, there have been signs of easing inflationary pressures. The wholesale-price inflation has steadily decreased since late 2013, while consumer-price inflation went below 10 percent this May, as the economy operates below capacity. However, the government's attempt to reduce the fuel subsidy bill by raising administered fuel prices will likely reverse the fall in inflation in the remaining part of the year.
