Management Discussion and Analysis

DISCLAIMER STATEMENT

Certain statements in this report on Management Discussion and Analysis may be forward looking statements and have been issued in terms of the applicable laws and regulations. These statements are based on certain assumptions and expectations of future events. Actual results could however differ materially from those expressed in the statements or implied due to the influence of external and internal factors, which are beyond the control of the Company. The Company assumes no responsibility in respect of forward-looking statements, which may be amended or modified in future on the basis of subsequent developments, information or events.

INDUSTRY OUTLOOK

Company's products, i.e, polyester POY, DTY (also in the process of installing additional capacities) falls under the category of Man-made Fibre. Globally, Man Made Fibre (MMF) is the most dominantly consumed textile fibre with a share of about 65 per cent and is expected to grow steadily in future. The per capita MMF consumption in India is estimated at 1.7 kg per annum against the global average of 10 kg per annum at present which is going to touch around 12 kg per capita by 2025 with the increase in population, per capita income, spending power and growth in GDP.

Low per capita MMF consumption in India reflects high growth potential for the domestic MMF industry in the medium to long term.

A recent industry research report says that factors like rise in disposable income, growing consumer class, rising urbanization, increased retail penetration and limited supply of cotton is set to increase the share of MMFs like polyester and viscose in the market till 2020, the salient points of which are attributed as under focusing polyester in particular :-

- Polyester to cater to 75% of the incremental fibre demand in the next five years.
- Polyester is making in roads in almost all applications.
- In India, Polyester Filament Yarn (PFY) capacity has

grown substantially in last decade and is likely to sustain similar growth rates at least for next five years. Present polyester capacity in India is around 46 lakh MT.

Ministry of Textiles, Govt. of India is taking initiatives to implement 'Textile Park' to initiate the cluster development and integrated downstream integrated textile operations, e.g., weaving, processing etc.. to create value chain.

THREATS

The key raw materials used in the Polyester industry, i.e., Purified Terephthalic Acid (PTA), Mono Ethylene Glycol (MEG) account for about 80% to 85% of the total manufacturing cost. The prices of these products are affected by the crude oil prices and move in tandem with the global prices. In the last five years scenario, crude oil prices have reached its crest to the range of 123-128 USD per barrel during March-April 2011 and February-March 2012 whereas the prices had hit its bottom range of 46-48 USD per barrel during January - March 2015.

In the short term, volatility of crude oil prices may impact the growth / viability of the industry.

OPPORTUNITIES

- i. Rapid urbanization, rising young working population, an increase in disposable incomes and increasing affordability vehicles are driving demand in downstream industry.
- ii. Emerging non-apparel application of fibre.
- iii. Price competitiveness of PFY vis-à-vis cotton yarns.
- iv. Fast changes in fashion design, growing exports of textiles.
- v. Substitution of other products, e.g., cotton, acrylic, wool etc. with polyester can be explored and established.
- vi. India's rapid progress of business relationship, land transport etc.. with Company's (ASSAM) adjoining countries, e.g., Bangladesh, Bhutan, Vietnam as well as China, shall usher for the Company's business growth in coming years.
