Rajshree Power Private Limited

As a business strategy, M/s Rajshree Power Private Limited was incorporated on 12th August 2010 as a subsidiary Company, as per the approval of the Board at its meetings held on 17th May 2010 and 29th July 2010 for carrying on power/energy related businesses. There were procedural difficulties in implementing this business strategy and commencing business and hence the Board considered dropping of the said proposal and dissolution of the said subsidiary.

The Company, therefore, had its name struck off by the Registrar of Companies Tamilnadu, Coimbatore.

Accounts of Subsidiaries

In line with the procedure given by the Ministry of Corporate Affairs, the consolidated financial statements are also being given in addition to the standalone financial statements of the Company. The financial statements of the subsidiary will however be made available to those members who request for the same.

FUTURE OUTLOOK

Sugarcane crushing for the year 2014-15 is expected to be lower than the crushing for the year 2013-14 due to decrease in plantation of sugarcane in our command area. Prolonged drought and absence of alternate sources of water for irrigation in our command area have hit sugarcane planting very badly. However the company is hopeful of improving the sugarcane planting in our command area with our focussed cane extension activities.

The domestic sugar prices have already started showing signs of recovery in this financial year and it is expected that sugar prices would remain firm reflecting the demand - supply situation over the next twelve months.

- a) Sugar melting, Centrifugal washing, PAN floor general use - 3kg/cm² steam used instead of 7 kg/cm² steam, Raw juice primary heating done with hot condensate water instead of IV body evaporator vapour, which resulted in reduction of steam % cane by 0.5% comparing to previous financial year. This resulted in 1935 Tons of steam saving and equivalent bagasse saving of 987 Tons per year.
- b) Service water tank level control automation, which results in power saving of 13500 KW per year approximately.

At Unit-II, Mundiampakkam

- a) Fifth Mill conventional top roller was replaced by lotus type roller to reduce moisture % bagasse from 51.5% to 50.5%. Moisture % bagasse got reduced by 1% thereby improvement in steam fuel ratio from 2.35 to 2.45.
- b) 35 Ton 'B' massecuite pump was replaced by 50 Ton pump to avoid parallel running of 2 Nos. of under sized 'B' massecuite pumps. 9KW / hour are saved by replacing 'B' massecuite pump.

At Unit-III, Semmedu

- a) Boiler feed pump speed control taken up in auto mode to monitor the drum level and other measures taken to reduce captive power consumption resulted in reduction of cogen Auxiliary power consumption from 10.5% to <9%.
- b) Introduced 5th mill Lotus roller (top) and reduced bagasse moisture to 49.7% and thereby cogen steam fuel ratio raised from 2.38 to 2.54.
- c) 9 ata steam for sulphur melting completely stopped by way of using waste heat recovery system with electrical heaters for initial start up. Resulted in power saving of 850 units per day.
- d) Introduced Direct Contact Heater for superheated wash water system for A-curing with 3 ata steam in lieu of 9 ata. Resulted in power saving of 350 units per day.
- e) 2x11 kw Sugar Feeder Table motors operated with timers for intermittent running. Resulted in power saving of 200 units per day.

ii) Additional investments and proposals, being implemented for reduction of consumption of energy.

At Unit-I: Installation of high drain top lotus roller in 5th mill to ensure reduction in bagasse moisture % and thereby increase in bagasse calorific value.

At Unit II: (1) Measures to improve boiler efficiency and (2) Measures to reduce captive power consumption in cogeneration plant.

At Unit III: Measures to reduce consumption of steam and power per ton of cane crushed.

iii) The impact of the above measures taken during financial year 2013-14 are expected to reduce the consumption of energy substantially and consequently the cost of production. The additional income by way of power saving is furnished hereunder:

- a) At Unit-I ₹ 25 lakhs (Approx)

MANAGEMENT DISCUSSION AND ANALYSIS

Industry Scenario and Development

Global Scenario

The Food and Agriculture Organization (FAO) is estimating that World sugar production is likely to increase slightly in Sugar Year (S.Y) 2013-14. Higher production in Brazil & Thailand would set off the decline in production from India and European Union. Despite its modest growth, global sugar production is anticipated to surpass consumption for the fourth consecutive year, with the surplus expected to hover around 4.2 million tons, resulting in a further build-up of stocks. As per International Sugar Organization, in the next season world sugar production may contract substantially by as much as two to three million tons, thus ending the surplus phase in the world sugar cycle.

World sugar consumption is set to grow by about 2 percent in S.Y 2013-14, sustained by increases in several developing countries that will benefit from falling domestic prices.

In the long term, World sugar production is expected to cross 209 million tons in 2020-21. The bulk of the additional sugar production is likely to come from the developing countries and the main burden of growth will continue to fall on Brazil.

On the global front, the Indian sugar sector occupies a noteworthy position of being the top producer after Brazil and the largest consumer of the commodity in the world. India remains a key growth driver for world sugar, growing above the average Asian and world consumption growth. India is expected to boost production substantially to around 30 million tons of sugar per year on average, by the end of this decade. Of course, annual sugar output in India will continue to be subject to periodic swings in response to the cyclical nature of the industry.

Global sugar prices

Sugar prices in the global markets were trading on their lowest levels in over three and half years due to a supply glut situation on the back of higher production in the major producing countries such as Brazil and India. White sugar price went down to \$ 407 per ton at the end of January, 2014. Similarly, raw sugar prices also dropped below 15 cents per pound, a level not seen since 2010.

However in the recent past, prices have started recovering after Brazilian industry group Unica forecast that sugar production in Brazil would decline. The estimates underlined market expectations that Brazil's worst drought in decades damaged the cane while it was developing. This could affect global supplies because Brazil produces and exports more sugar than any other country.

In the last week of April 2014, white sugar was trading around \$470 per ton and raw sugar around 17.45 cents per pound.

Sugar Sector in India

In India, till 1st fortnight of April 2014, the country has produced 23.15 million tons of sugar about 1 million ton less than the sugar produced upto the same corresponding period last year. Indian Sugar Mills Association (ISMA) has estimated that 23.8 million tons of sugar will be produced in the current season, which will be 1.3 million tons less than 25.1 million tons produced in 2012-13 sugar season. Barring Karnataka, all other sugar producing States like Uttar Pradesh, Maharashtra, Tamil Nadu and Andhra Pradesh have registered fall in sugar production. The main reasons behind the lower sugar production in Uttar Pradesh is damage of sugarcane crops due to heavy rainfall in Eastern U.P region and diversion of sugarcane by farmers to alternate sweetener producers. Though recovery % is good in the State, yield is estimated to be lower than last year.

With an opening stock of about 8.8 million tons and estimated domestic demand of about 23 million tons, India is set for a fourth consecutive year of surplus.

Tamil Nadu has produced 1.03 million tons of sugar, which is about 30% less than last year. It is expected that about 3.5 lakh tons of sugar will get produced in the special season in August - September, 2014.

Sugarcane Acreage

According to the Ministry of Agriculture, cane planting for the 2013-14 season was 2.62 percent lower at 48.74 lakh hectares as against 50.06 lakh hectares in the previous year. Uttar Pradesh covered the largest area under cane at about 25.17 lakh hectares, followed by Maharashtra and Karnataka with about 5.7 lakh hectares and 3.48 lakh hectares respectively. Area under cane in Maharashtra was sharply down around 40 percent due to poor rains and worries over drought situation. However, favorable monsoons coupled with a sharp rise in the State Advised Price led to higher plantings in Uttar Pradesh, which partially offset the loss in area in Maharashtra. According to the 1st advance estimates released by the Ministry of Agriculture, cane production for 2013-14 is pegged at 341.77 million tons, higher marginally than the target 340 million tons.

Tamil Nadu continues to be affected by vicissitudes of nature. Prolonged drought and no prospect of water from other sources for irrigation have hit sugarcane planting very badly. Owing to these factors, the coming season could also see a drop in production.

As per the recent forecast by the India Meteorological Department (IMD), Monsoon rainfall is likely to be below average this year. A deficient monsoon can further dampen the sugarcane planting prospects.

Sugarcane Price

Minimum price of sugarcane to be paid by sugar mills is being regulated by the Government by means of Fair and Remunerative Price (FRP). FRP for sugarcane in the 2013-14 sugar season had been fixed at ₹ 210/- per quintal. For the sugar season 2014-15, the Government, in line with the recommendation of the Commission for Agricultural Costs and Prices, has approved an increase of ₹ 10/- per quintal and thus fixed FRP at ₹ 220/- per quintal.

During the year, Tamil Nadu Government has hiked the State Advised Price (SAP) from ₹ 2250/- per ton to ₹ 2550/- per ton (linked to 9.5% recovery) plus a transport cost of ₹ 100/- per ton for the 2013-14 sugar season. SAP is yet to be announced for 2014-15 sugar season.

Sugar Decontrol

On one hand, like other agricultural commodities, sugar is subject to price fluctuations resulting from shifts in demand and supply, weather, domestic and foreign trade policies and other factors beyond control. On the other hand, every year the Central Government announces the minimum price for sugarcane, referred to as the Fair and Remunerative Price (FRP) at which sugar factories are legally required to pay farmers for their sugarcane. In addition to the above, State Governments announce sugarcane price for its respective states known as State Advised Price (SAP) which is substantially higher than the FRP. This forces mills to buy sugarcane at a fixed price in a season irrespective of the highly volatile sugar prices. The disconnect between sugarcane and sugar prices continues to weigh heavily on the sector. In order to ensure long term viability and sustainability of the industry, there is a need to have a linkage between the sugar and sugarcane price.

At the time of partial decontrol in April 2013, Central Government advised the State Governments to implement revenue sharing model for determination of cane price as recommended by the Rangarajan Committee. Maharashtra and Karnataka, have migrated to sharing the revenue from sales of sugar and its by-products such as electricity and alcohol/ethanol with growers based on Rangarajan Committee formula. While Karnataka State passed the Karnataka Sugarcane (Regulation of Purchase and Supply) Act, 2013 to implement this, Maharashtra state also passed the Maharashtra Regulation of Sugarcane Price (Supplied to Factories) Act, 2013 for linking cane prices with end product prices as per Rangarajan Committee recommendations. Other sugar producing states are yet to implement this recommendation of the Rangarajan Committee.

Sops from Central Government

During last quarter of 2013-14, the Central Government, with a view to improve liquidity position of sugar factories for enabling them to clear cane price arrears of previous seasons and timely settlement of cane price of current season has notified 'the Scheme for Extending Financial Assistance to Sugar Undertakings 2014 (SEFASU) worth ₹ 6,600 crore. Accordingly loans equivalent to the excise duty, cess and surcharge on sugar paid by the mills in the past three years and with an interest subvention upto 12% are being given to sugar mills to clear the cane payment arrears.

Similarly to combat the glut of sugar and arrest the slide in price, Central Government has announced an incentive of ₹ 3,300 per ton for export of raw sugar. The amount of incentive is liable to be reviewed every quarter and the scheme is applicable for an export of 4 million ton raw sugar during the season 2013-14 and 2014-15.

Ethanol

The Cabinet Committee on Economic Affairs last year mandated 5% ethanol blending in petrol and also allowed oil companies to negotiate the price with domestic and overseas suppliers of the bio fuel. The programme has been marred by legal and pricing hiccups throughout last year. Against the requirement of 105 crore litre of ethanol for mandatory 5% blending with petrol, we understand that oil companies have contracted just 62 crore litre, half of which is yet to be lifted from depots.

Outlook

Domestic prices have started showing signs of recovery in the new financial year and we expect that domestic sugar prices to remain stable over the next 12 months, fuelled by a decline in production in the current season. We expect that with the recently announced incentive, exports would increase, thus, leading to reduction of stock piles of sugar. Also, domestic demand may improve in the coming days during summer from the beverage industry. In the global markets too, we expect prices may find support in the coming days due to weather concerns in Brazil.

Risks and concerns

Your company continues to review and manage the risks emanating from such a dynamic environment at periodic intervals. The major risks faced by the industry include sugarcane availability, price realization and regulatory control by Government, financial liquidity, amongst others.

Sugarcane availability

Sugarcane is the main raw material in sugar mills. Sugarcane cultivation is monsoon dependent. Hence it becomes unpredictable in adverse climatic conditions. Similarly other factors like scarcity of harvest labour, lower sugarcane price, availability of attractive competitive/alternate crops will have a direct impact on cane availability and affect our business.

Risk mitigation: The Company has mitigated this risk by following:

- Continuous yield improvement activities to obtain a better quality cane leading to a better recovery.
- Close monitoring of cane development activities, which includes supply of good quality seeds, fertilisers and manure, among others.
- Promoting drip irrigation.
- Testing new improved varieties of cane.
- Careful monitoring of cane planting and harvesting schedule.
- Introduction of mechanical harvesters.
- Timely cane payment to farmers and maintaining good relationship with them.

Sugar price realization risk

Sugar being a commodity, the sugar price remains volatile and realizations get adversely affected during a downturn. Coupled with this, higher cane price too affects profitability.

Risk mitigation: To address the challenge of cyclical in the sugar business, the Company has adopted an integrated business model manufacturing sugar and also producing alcohol and cogenerating power from the sugarcane residue viz., molasses and bagasse. The Power and Alcohol business enhances the profitability of the company and de-risks the business from the adverse movements of sugar price. While Unit I (Varadarajnagar) is already an integrated complex, we have now made Unit II (Mundiyampakkam) and Unit III (Semmedu) also integrated complexes with the commissioning of a state of the art multi-pressure alcohol distillation plant.

The Company is also focusing on improving direct sales to institutional buyers to lock down on prices, thereby balancing the volatility of the market.

Regulatory risk

Last year, the Central Government partially decontrolled sugar sector by abolition of the levy sugar obligation and also dismantling the regulated free sugar release mechanism, thereby freeing mills to sell sugar without any limitation of periodic quotas as in the past. However, the sugar industry continues to be regulated by State Governments by other controls viz., reservation of cane area and fixing sugarcane price.

Risk mitigation: Indian Sugar Mills Association (ISMA) and South Indian Sugar Mills Association (SISMA) of which the Company is a member are in the process of presenting recommendation for appropriate policy changes to reduce governmental influence in the sugar sector and work towards complete decontrol of the sugar industry.

Financial liquidity risk

Sugar industry is highly working capital intensive. Raising adequate and rightly-priced working capital or arranging funds for payment of the interest and principal with respect to loans availed might pose challenge. The other associated risk is soaring interest rates.

Risk mitigation: During the year under review, the Company had taken a decision to undertake a debt restructuring exercise under the Corporate Debt Restructuring (CDR) mechanism in consultation with its secured lenders. The CDR proposal as recommended by State Bank of India (SBI), the lead lender and supported by other lenders was approved by CDR Empowered Group. The key features of the CDR Proposal are given in detail under Notes to Financial Statements forming part of this Annual Report.

With the active support of our secured lenders, the approved CDR proposal was put into implementation as a result of which the risks associated with repayment obligations of principal debts and interest has been deferred. This measure gives your company to have more disposable liquidity, during the moratorium period, for improving its performance and reducing risk associated with credit repayment.

Consequent to implementation of CDR proposal, risks associated with interest rate fluctuation has been substantially mitigated with reduction of interest rate and fixing the interest rate regime on the term debts for a longer period. However, the CDR lenders would have a right of recompense for their sacrifices, at the time of Company's exit from CDR.

Internal control systems and their adequacy

The Company has a well-established internal control system in the form of well-documented policies, authorisation guidelines commensurate with the level of responsibility and standard operating procedures, to ensure proper functioning of operations. Moreover there exists an effective internal audit system, commensurate with the requirements of the company.

The Board, Audit Committee and the Management review the findings and recommendations of the Internal Auditors and take corrective action, wherever necessary. Moreover the Audit Committee periodically interacts with Statutory Auditors and makes continuous assessments of the adequacy and effectiveness of the internal control systems.
