Management Discussion and Analysis

GLOBAL ECONOMY

Global growth remains moderate, with uneven prospects across the main countries and regions. It is projected to be 3.5 percent in 2015, in line with forecasts in the January 2015 World Economic Outlook (WEO) Update. Relative to last year, the outlook for advanced economies is improving, while growth in emerging market and developing economies is projected to be lower, primarily reflecting weaker prospects for some large emerging market economies and oil-exporting countries. While these increasingly influence competitiveness and the global economy tentatively recovers from the economic crisis, significant risks remain, resulting from a strained geopolitical situation, rising income inequality and the potential tightening of financial conditions. As we evidence fall in crude prices globally, it is benefiting commodities dependent economies like Brazil and Russia, China and India thereby easing inflationary pressures.

INDIAN ECONOMY

The Indian Economy has started recuperating with GDP growth recovering from decadal lows of 4.6% y-o-y in Q1-2014 to 7.5% y-o-y in Q1-2015 putting it ahead of China as the world's fastest growing large economy in the coming years. Also, the growth in Index of Industrial Production was recorded at 4.1% y-o-y at the end of April 2015, indicating an incipient recovery in the output of the core sector industries. With Government of India's focus on pro-business legislations, expeditious clearances to large scale infrastructure projects, lowering the fiscal and current account deficit, controlling inflation, there are expectations of a major economic revival and growth.

INDUSTRY OVERVIEW

The NBFC sector has been gaining systemic importance in the recent years and the share of NBFC has steadily grown from 10.7% of banking assets in 2009 to 14.3% of banking assets in 2014. NBFCs typically have several advantages over banks due to their focus on niche segment, expertise in the specific asset classes, deeper penetration in the rural and unbanked markets.

The growing asset size of the NBFC sector has increased the need for risk management in the sector due to growing interconnectedness of NBFCs with other financial sector intermediaries. The Reserve Bank of India (RBI) has been in the recent past trying to strengthen the risk management framework in the sector, simplify the regulations and plug regulatory gaps so as to prevent regulatory arbitrage between banks and NBFCs.

Due to subdued economic growth, last two years, have been challenging period for the NBFCs with moderation in rate of asset growth, rising delinquencies resulting in higher provisioning thereby impacting profitability. However, comfortable capitalisation levels and conservative liquidity management, continues to provide comfort to the credit profile of NBFCs in spite of impact on profitability.

FINANCIAL PERFORMANCE

The Company's Gross Loan Assets under Management increase from Rs. 43,66,48,855 in FY 2013-14 to Rs. 68,97,26,046/- in FY 2014-15. During the year under consideration your Company's total income including other income is Rs. 18,65,79,075/- as compared to Rs. 19,53,81,948/- in the previous year. The Net Profit after tax is Rs. 7, 51, 14,118/- against the profit of Rs. 2, 26, 78,850/- in the previous year.

RISK MANAGEMENT

The objective of risk management systems is to measure and monitor the various risks the Company is subject to and to implement policies and procedures to address these. The Company continues to improve its operating processes and risk management systems that will further enhance its ability to manage these risks.

Operational risk

Operational risks is broadly defined as the risk of direct or indirect loss due to the failure of systems, people or processes, or due to external events. It includes employee negligence, fraud, petty theft, burglary and embezzlement. Company has instituted a series of checks and balances, including an operating manual, and both internal and external audit reviews.

Credit risk

Credit risk is the possibility of loss due to the failure of any counterparty to abide by the terms and conditions of any financial contract with the Company. Your Company aims to reduce credit risk through a rigorous loan approval and appraisal process, as well as a strong NPA monitoring and collection strategy.

Market risk

Market risk refers to potential losses arising from the movement in market values of interest rates in the Company's business. The objective of market risk management is to avoid excessive exposure of earnings and equity to loss and to reduce its exposure to the volatility inherent in financial instruments. The majority of the Company's borrowings, and all the loans and advances it makes, are at fixed rates of interest. This minimises the Company's interest rate risk.

Liquidity risk

Liquidity risk is the risk of being unable to raise necessary funds from the market at optimal costs to meet operational and debt servicing requirements. The Company tracks the potential impact of prepayment of loans at a realistic estimate of its near to medium-term liquidity position.

Business cycle risk

Business cycle risk is the risk associated with the seasonal or cyclical nature of a business. As customers include both individuals and business loan products are used by customers in various industries, trade cycles have limited impact on Company's business.
