MANAGEMENT DISCUSSION AND ANALYSIS REPORT

1. BACKGROUND

The Management Discussion and Analysis sets out the developments in the business environment and the Company's performance since our last report. This analysis supplements the Directors' Report and the Audited Financial Statements forming part of this Annual Report.

2. INDUSTRY STRUCTURE

Ferro Alloy Industry was established to cater to the needs of steel industry. Ferro alloys are used as additives and deoxidizing agents in steel manufacture. Steel producers use Ferro manganese, Silico Manganese and Ferro Silicon, while stainless steel units use Ferro chrome and charge chrome. At present, though there is surplus capacity in the country, severe power cuts is hampering the production. Indian steel demand is expected to increase due to Infrastructure & Construction activities.

3. OPERATIONS, OPPORTUNITIES & THREATS OPERATIONS:

This has been dealt with in the Directors' Report.

OPPORTUNITIES:

India's natural resources and geographical position is well poised to benefit from the growing demand for steel and steel making raw materials. However, for the Ferro alloys industry, high energy costs have hampered the growth and remedial measures expected to push the growth.

Out of the global production of over 1,527 million tones, India's share in steel manufacturing is 77.6 million tones which is increasing. Given the important role that infrastructure creation can play in restoring economic growth in the country, the consumption of steel is bound to show an increasing trend. This is a positive indicator for growth of Ferro alloy production in India, as Ferro alloys are vital inputs to steel-making.

THREATS:

The manufacture of Ferro alloys is highly power intensive and therefore the cost of power is critical to the competitiveness of the products. On an average, 50% of the total cost per tone of Ferro alloys is accounted for by power. Repeated power tariff hikes by state run power utility company have put the Industry in a fix. Further the problems of this industry are aggravated because of the high input cost of power including FSA charges.

This is the major threat that this industry is facing and in order to be competitive on a global scale, it is necessary for an Indian Ferro alloys Industry to have captive power to tide over the situation in power starved country like India.

4. SEGMENT-WISE PERFORMANCE OR PRODUCT-WISE PERFORMANCE

The Company has only one business segment i.e., Ferro Alloys.

5. OUTLOOK

Long term outlook of your company will be encouraging because of the following reasons:

The Company is in the process of setting up Captive Power Plant of 120 MW (2x60MW) capacity at Bodepalli Village, Sirpur Kaghaznagar Mandal, Adilabad District in the State of Telangana State through VBC Power Company Limited, a Special Purpose Vehicle (SPV) Company.

6. RISKS & CONCERNS

- a. In a time frame for setting up of captive power plant and coming into production will depend upon the financial closure of the project and approval of hive off scheme.
- b. Government regulations, like reduction in import duties, anti dumping duty and increase in power tariffs by SPDC of Telangana Limited and shortage of power, may also affect the profitability of the Company, since 40% or more production costs account for power.

7. INTERNAL CONTROL SYSTEMS AND ADEQUACY

The Company has sound internal control system, which ensures that all the assets are protected against loss from unauthorized use and all transactions are recorded and reported correctly.

The internal control system is supplemented by an extensive programme of internal audits and reviews by the Management. The internal control systems are designed to ensure that the financial and other records are reliable for preparing financial statements and other data and for maintaining accountability of assets.

Further, all internal control functions and its entire gamut of activities are covered by independent audit, conducted by separate internal auditors, whose findings are reviewed regularly by the Audit Committee and Management of the Company.

8. DISCUSSIONS ON FINANCIAL PERFORMANCE WITH RESPECT TO OPERATIONAL PERFORMANCE

This has been dealt with in the Directors' Report

9. HUMAN RESOURCE DEVELOPMENT

The Company does not recognise a contingent liability but discloses its existence in the financial statements.

1.14 Provisions:

A contingent liability is a possible obligation that arises from past events whose existence will be confirmed by the occurrence or non-occurrence of one or more uncertain future events beyond the control of the group or a present obligation that is not recognized because it is not probable that an outflow of resources will be required to settle the obligation. A contingent liability also arises in extremely rare cases where there is a liability that cannot be recognized because it cannot be measured reliably. The company does not recognize a contingent liability but discloses its existence in the financial statements.

1.15 Earnings per share:

Basic earnings per share are calculated by dividing the net profit or loss for the year attributable to equity shareholders by the weighted average number of equity shares outstanding during the year.

As at the reporting date, the Company has not issued any potential equity shares and accordingly the basic earnings per share and diluted earnings per share at the same.

1.16 Income taxes:

Tax expense comprises of current and deferred tax. Current income tax is measured at the amount expected to be paid to the tax authorities in accordance with the Income Tax Act, 1961. Deferred income taxes reflect the impact of current period timing differences between taxable income and accounting income for the period and reversal of timing differences of earlier years. Deferred tax is measured based on the tax rates and the tax laws enacted or substantively enacted at the balance sheet date. Deferred tax assets are recognized only to the extent that there is reasonable certainty that sufficient future taxable income will be available against which such deferred tax assets can be realized. In situations where the Company has unabsorbed depreciation or carry forward tax losses, all deferred tax assets are recognized only if there is virtual certainty supported by convincing evidence that they can be realized against future taxable profits.

Due to steep increase in the power tariff, the cost of production of Ferro Silicon has far exceeded the market prices, resulting in non recovery of even variable cost of production. Accordingly the company has closed down its production unit at Rudraram Village, Medak district since June 2013. Further the company has entered into a memorandum of settlement with the workers' union on 30.06.2014 for their retrenchment. However, the books of account are maintained under "going concern" concept, as the company has initiated effective steps to meet its power requirements by setting-up a 120 MW captive thermal power plant at Sirpur Kagaznagar Mandel, Adilabad District through a separate company, by transferring its power unit by way of demerger.

Note No: 2.28

**Note No: 2.27:**

Due to steep increase in the power tariff, the cost of production of Ferro Silicon has far exceeded the market prices, resulting in non recovery of even variable cost of production. Accordingly the company has closed down its production unit at Rudraram Village, Medak district since June 2013. Further the company has entered into a memorandum of settlement with the workers' union on 30.06.2014 for their retrenchment. However, the books of account are maintained under "going concern" concept, as the company has initiated effective steps to meet its power requirements by setting-up a 120 MW captive thermal power plant at Sirpur Kagaznagar Mandel, Adilabad District through a separate company, by transferring its power unit by way of demerger.

Note No: 2.28
