The S&P BSE SENSEX overcame an emerging market sell-off at the start of the month to post eight new all-time highs in August. The equity benchmark ended the month with a 2.88% gain.

Healthcare led the way among S&P BSE sectors after proposals for a National Health Protection Mission improved the outlook. Utilities came second with 7.15%, while Telecom was the only sector to fall this month, down 52 basis points.

Keeping a close eye on accruals, leverage, and return on equity was helpful this month; the S&P BSE Quality Index topped the charts among Indian equity strategies. Low Volatility and Dividend Stability also fared well.

The S&P BSE India 10 Year Sovereign Bond Index fell this month as the Reserve Bank of India decided to hike interest rates in an effort to curb inflationary pressures. The hike did not help the rupee; it later fell to historic lows against the U.S. dollar.

August was challenging for the commodity markets; the Dow Jones Commodity Index fell by nearly 2% as a strengthening U.S. dollar provided headwinds. Crude oil was an exception to the rule; bigger-than-expected declines in U.S. inventories helped the S&P GSCI Crude Oil Index to gain, which in turn helped the S&P GSCI.

Summary

- The S&P BSE SENSEX overcame an emerging market sell-off at the start of the month to post eight new all-time highs in August. The equity benchmark ended the month with a 2.88% gain.

- Healthcare led the way among S&P BSE sectors after proposals for a National Health Protection Mission improved the outlook. Utilities came second with 7.15%, while Telecom was the only sector to fall this month, down 52 basis points.

- Keeping a close eye on accruals, leverage, and return on equity was helpful this month; the S&P BSE Quality Index topped the charts among Indian equity strategies. Low Volatility and Dividend Stability also fared well.

- The S&P BSE India 10 Year Sovereign Bond Index fell this month as the Reserve Bank of India decided to hike interest rates in an effort to curb inflationary pressures. The hike did not help the rupee; it later fell to historic lows against the U.S. dollar.

- August was challenging for the commodity markets; the Dow Jones Commodity Index fell by nearly 2% as a strengthening U.S. dollar provided headwinds. Crude oil was an exception to the rule; bigger-than-expected declines in U.S. inventories helped the S&P GSCI Crude Oil Index to gain, which in turn helped the S&P GSCI.

It is not possible to invest directly in an index. Exposure to an asset class represented by an index is available through instruments such as funds, trusts, and structured notes. These instruments have risks, costs, and expenses different from and potentially higher than investing directly in the assets of the index. For more information on the risks of investing using these instruments, please refer to their respective offering documents.

Performance Disclosure

Charts and graphs are provided for illustrative purposes. Past performance is not an indication or guarantee of future results. The charts and graphs may reflect hypothetical historical performance. All information presented prior to the launch date is back-tested. Back-tested performance is not actual performance, but is hypothetical. The back-test calculations are based on the same methodology that was in effect when the index(es) was officially launched. However, it should be noted that the historic calculations of an Economic Index may change from month to month based on revisions to the underlying economic data used in the calculation of the index. Complete index methodology details are available at www.spdji.com. It is not possible to invest directly in any index.

S&P Dow Jones Indices defines various dates to assist our clients in providing transparency on their products. The First Value Date is the first day for which there is a calculated value (either live or back-tested) for a given index. The Base Date is the date at which a given index is set at a fixed value for calculation purposes. The Launch Date designates the date upon which the values of a given index are first considered live: index values provided for any date or time period prior to the index’s Launch Date are considered back-tested. S&P Dow Jones Indices defines the Launch Date as the date by which the values of an index are known to have been released to the public, for example via S&P Dow Jones Indices’s public website or its datafeed to external parties. For Dow Jones-branded indices introduced prior to May 31, 2013, the Launch Date (which prior to May 31, 2013, was termed “Date of introduction”) is set at a date upon which no further changes were permitted to be made to the index methodology, but that may have been prior to the index’s public release date. Prospective application of the methodology used to construct the index(es) as well as revisions to economic data may not result in performance commensurate with the back-test returns shown. The back-test period does not necessarily correspond to the entire available history of the index(es). Please refer to the index methodology for the particular index in question, available at www.spdji.com, for more details about such index, including the manner in which it is rebalanced, the timing of such rebalancing, criteria for additions and deletions, as well as all index calculations.

Another limitation of using back-tested information is that the back-tested calculation is generally prepared with the benefit of hindsight. Back-tested data and/or information reflects the application of the index methodology and selection of index constituents in hindsight. No hypothetical record can completely account for the impact of financial risk in actual trading. For example, there are numerous factors related to the equities, fixed income, or commodities markets in general which cannot be, and have not been accounted for in the preparation of the index information set forth, all of which can affect actual performance.

The index returns shown do not represent the results of actual trading of investable assets/ securities. S&P Dow Jones Indices LLC maintains the index(es) and calculates the index levels and performance shown or discussed, but does not manage actual assets. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the index(es) or investment funds that are intended to track the performance of the index(es). The imposition of these fees and charges would cause actual and back-tested performance of the securities/fund to be lower than the index performance shown. As a simple example, if an index returned 10% on a US $100,000 investment for a 12-month period (or US $10,000) and an actual asset-based fee of 1.5% was imposed at the end of the period on the investment plus accrued interest (or US $1,650), the net return would be 8.35% (or US $8,350) for the year. Over a three year period, an annual 1.5% fee taken at year end with an assumed 10% return per year would result in a cumulative gross return of 33.10%, a total fee of US $5,375, and a cumulative net return of 27.2% (or US $27,200).
