Facts of Fragrances and Flavours

The sense of smell is the first of all our senses to develop. Even before we are born, our sense of smell is fully formed and functioning.

A study indicates that 80% of the flavours we taste come from what we smell (which is why foods can become flavourless when we have a blocked nose)

Smell is the most sensitive of the senses. People can remember smells with 65% accuracy after a year, while visual recall is about 50% after three months.

Studies show that 75% of emotions are triggered by smell which is linked to pleasure, well-being, emotion and memory - handy when you want people to buy your products.

Scents can have positive effects on mood, stress reduction, sleep enhancement, self-confidence, and physical and cognitive performance.

The human brain can process roughly 10,000 smells in an area the size of a postage stamp, each triggering a neural response.

Your sense of smell accounts for 75-95% of the impact a flavour has.

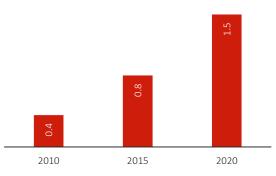

Flavours & Fragrance Industry Overview

Oriental Arcmatics Ltd.

- The global flavour and fragrance (F&F) market is valued at USD 21 Bn in 2018 and is projected to reach USD 35 Bn by 2028 growing at a CAGR of 5.1%.
- Of the main global regions, the flavours and fragrances market is largest in the Asia-Pacific region, followed by North America and Western Europe.
- The Indian Flavour & Fragrance (F&F) market in 2018 is INR 6,000 Cr and is primarily dominated by global MNC's while local players are fragmented and smaller in size, mostly catering to the unorganized market.
- In India, the top 6 F&F Players contribute 72% of the total market while the balance 28% is held with the smaller players.
- The Fragrance Segment is more consolidated, though, relative to the Flavours with top 5 players constituting 85% of the fragrance segment relative to 58% for the latter.
- Organized F&F industry is growing at 12% CAGR expected to track growth in consumer staples.
- Growth is likely to come from consumer 'upgrading' in mature product categories. India has a growing population of working women, which is expected to emerge as a large consumer of FMCG products.

Fragrance Compounds

- A Fragrance compound, also known as an odorant, aroma, is a chemical compound that has a smell or odour.
- Perfume is described as having three sets of notes, making the harmonious scent accord. The notes unfold over time, with the immediate impression of the top note leading to the deeper middle notes, and the base notes gradually appearing as the final stage.
- OAL delivers innovative fragrance formulations to a wide set of customers. The Company continually strives to find the best balance between creativity and functional needs to develop fragrances with the highest acceptance and the best release performance in the final product.

Flavour Compounds

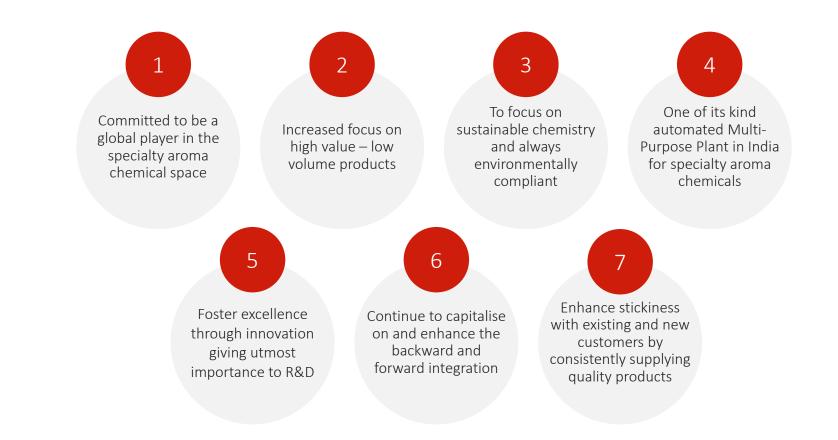

- Flavour is the sensory impression of food or other substance, and is determined primarily by the chemical senses of taste and smell.
- Smell is the main determinant of a food item's flavour.
- While only five basic tastes sweet, sour, bitter, salty and umami (savoury) are universally recognized, the number of food smells is unbounded.
- A "flavourant" is defined as a substance that gives another substance flavour, altering the characteristics of the solute, causing it to become sweet, sour, tangy, etc.
- These mixtures are formulated by OAL to give a food product a unique flavour and to maintain flavour consistency between different product batches or after recipe changes.
