When the mind's on a leash

Neurotechnologies are expanding faster than the speed of light. Brain-based lie detection, devices to assess moods and emotions, recognition of memories and personal knowledge and sexual or political inclinations have already been deployed in several nations, with varying degrees of success. The manipulation of brain activity has also been around for some time now and has been ramped up with AI-based 'interventions'.

Neurointerventions are not just examination and alteration of brain physiology. They could have profound effects on the personhood of a person. Alterations to the brain's functioning can possibly produce entirely or partially new persons. If, at some point in the future, the law enforcement process includes procedures to 'correct' criminal behaviour by modifying brains, then we are looking at a sci-fi scenario wherein a person could be remade. This kind of a situation opens up the field of neurorights that have two key components. The first is the right to bodily integrity (in Article 3 of the Charter of Fundamental Rights of the European Union, the Convention on the Rights of Persons with Disabilities, and elsewhere) where a person's body cannot be violated without her/his express consent. The second is the right to mental integrity where a person's mind cannot be violated without her/his express consent. The first prohibits — we can see this injunction in the world's first legislation on the use of AI promulgated by the European Union to be enforced from 2026 — violations of the physical/corporeal person. The second prohibits violations of the mind (not just the brain). Taken together, these rights call for respecting the bodily and the mental autonomy of a person, unless she/he is willing to have these modified (for example, those who take recreational drugs or voluntarily choose implants/prostheses are using their autonomy to enable corporeal and mental modification, permanent or temporary).

The view that an individual is an autonomous being and that this autonomy is personhood informs the world's human rights discourses initiated by the Universal Declaration of Human Rights. But neurotechnologies, human rights scholars fear, can potentially disrupt this autonomy. Neurotechnologies are expanding faster than the speed of light. Brain-based lie detection, devices to assess moods and emotions, recognition of memories and personal knowledge and sexual or political inclinations have already been deployed in several nations, with varying degrees of success. The manipulation of brain activity has also been around for some time now and has been ramped up with AI-based 'interventions'.

Neurointerventions are not just examination and alteration of brain physiology. They could have profound effects on the personhood of a person. Alterations to the brain's functioning can possibly produce entirely or partially new persons. If, at some point in the future, the law enforcement process includes procedures to 'correct' criminal behaviour by modifying brains, then we are looking at a sci-fi scenario wherein a person could be remade. This kind of a situation opens up the field of neurorights that have two key components. The first is the right to bodily integrity (in Article 3 of the Charter of Fundamental Rights of the European Union, the Convention on the Rights of Persons with Disabilities, and elsewhere) where a person's body cannot be violated without her/his express consent. The second is the right to mental integrity where a person's mind cannot be violated without her/his express consent. The first prohibits — we can see this injunction in the world's first legislation on the use of AI promulgated by the European Union to be enforced from 2026 — violations of the physical/corporeal person. The second prohibits violations of the mind (not just the brain). Taken together, these rights call for respecting the bodily and the mental autonomy of a person, unless she/he is willing to have these modified (for example, those who take recreational drugs or voluntarily choose implants/prostheses are using their autonomy to enable corporeal and mental modification, permanent or temporary). The view that an individual is an autonomous being and that this autonomy is personhood informs the world's human rights discourses initiated by the Universal Declaration of Human Rights. But neurotechnologies, human rights scholars fear, can potentially disrupt this autonomy. A 'person' is made of biases, desires, political ideas, religious beliefs, fears and rational or irrational thoughts. The human being is a sum total of these. The person is more often than not a bundle of contradictions. This is why we are suspicious of automata or even humans who are so single-minded as to appear inhuman.

Why there's no need to worry about Trump 2.0

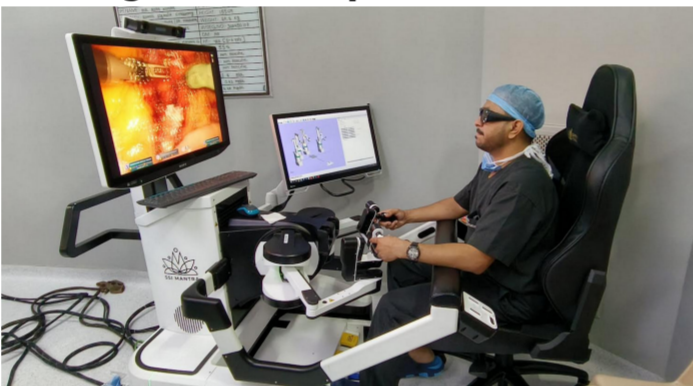

There are numerous reports about anxiety and apprehension in some parts of the world about the possibility of return of Donald Trump to the White House post 2024 presidential election in the United States. Many countries fear that the world order under the Trump 2.0 is going to drastically change and preparations should begin to confront the coming challenges before it is too late. Is the world order going to be radically different, if Donald Trump becomes the 47th President of the United States? Most of such apprehensions come from the trans-Atlantic allies of the United States. During his presidency, Donald Trump's language and tone regarding the relevance and viability of North Atlantic Treaty Organisation were harsh and unsettling. But the main message from the Trump White House for the alliance partners was to follow the norm of defence burden sharing and make contributions of 2 per cent of their respective GDP for collective defence. Trump's communication was downright clear; it had an effect on the members and today about two-thirds of NATO members spend 2 per cent of their GDP for defence. Donald Trump during his current campaign for the presidential position has yet again sought to frighten the NATO members who are yet to comply with the requirement by saying that he would allow Russia to do anything it wants with such NATO members. This statement has sparked anger, fear and disenchantment in Europe because of its timing. First, Trump's remark was made amidst Russia's continuing war in Ukraine. Second, Trump is against spending billions of dollars to back Ukraine defend itself against Russia. Third, it is largely because of him that

the US Congress has not yet been able to authorise more than \$60 billion of additional aid to Ukraine. Fourth, he has bragged that he would end the war in one day, if he is elected. This has created a perception that he may allow Russia to annex the areas it has occupied in Ukraine as part of the deal to end the war. However, Trump has clarified that he will not withdraw from NATO. There are talks about defence capability building in Europe and Trump's statements have energised the countries that have for long supported a militarily stronger Europe. Trump 2.0 administration would certainly accept the idea of a stronger Europe, which will actually be effective defence burden sharing. Thus not much change in trans-Atlantic ties is likely to an extent that would affect the global strategic order. It is important to note that it was Donald Trump who sought to shape the Indo-Pacific order by issuing a strategy report in 2017; by reviving the dormant Quadrilateral Security Dialogue, by adopting a tougher stance on unfair trade practices of China and engaging in a tariff war with Beijing and further strengthening defence and security partnership with India for maintaining peace, stability and freedom of navigation in the Indo-Pacific. Significantly, his successor President Joe Biden did not alter Trump's strategic initiatives in the Indo-Pacific and rather built upon them by elevating Quad to summit level meetings and operationalising it with working groups, by launching AUKUS defence pact with United Kingdom and Australia,

which may be expanded to include Japan in the near future and standing behind Taiwan and the Philippines in the face of Chinese aggressive postures and grey zone offensive moves. As far as the hydrocarbon resource rich West Asia is concerned, Donald Trump during his presidency successfully engineered the Abraham Accords as a positive step towards promoting peace in the region and enhancing Arab-Israeli constructive interactions. Under American inspiration and encouragement the UAE and Bahrain signed agreements with Israel. Trump was dead against the nuclear deal with Iran, but Biden has not been able to do much to revive the deal and Washington's relationship with Iran is anything but friendly. Both Trump and Biden are pro-Israel and no matter who wins the election, US-Israel strategic cooperation will endure. While Trump is credited with signing of the Abraham Accords, Biden encouraged a new quadrilateral cooperation mechanism consisting of India, Israel, UAE and the US (I2U2). Biden did not oppose the Abraham Accord and Trump 2.0 is unlikely to dispute I2U2. Thus no discernible transformation in the broader strategic order in West Asia is likely to come about post 2024 US election. The world has lived with Trump Administration 1.0. The transition period after Trump's victory in 2016 presidential election was a little chaotic. None expected a business tycoon and a political outsider like Trump to win the election. The Trump team was not ready with any blueprint for the administration to lead the global affairs. But Trump 2.0 administration, if it comes about, will not be as muddled. Think tanks and several advisors and experts supporting Trump are quietly working on projects, schemes and missions to make the transition orderly and peaceful. What worries and confuses the international community is the artless language and raw rhetoric used by Donald Trump during the campaigns. His statements can hurt or bring delight, embolden the adversarial nations and frighten friendly countries, but a little dissection and reading between the lines make it clear that Trump will do whatever he thinks to be good for America and, of course, for his party. The world order takes decades to form and no single country can shape it in full. Trump has to respond to events abroad and actions of other powerful and influential countries. And the international community likewise will have to respond to Trumpian approach to global affairs. Prime Minister Narendra Modi-led NDA government has had deep experience in dealing with President Trump. If the current trend continues in Indian politics, NDA under the leadership of Modi will form the next government after the national elections. There is little to be concerned about Trump 2.0 administration in the US. There will be certain bilateral differences over trade and investment issues between India and the US. The strategic convergences between India and the US will be durable and effective. India will remain a strong partner of the US in shaping events in the Indo-Pacific and West Asia that will contribute to global peace and stability. What India needs to cogitate upon is the ways and means of coordinating with the US to work on the existing mechanisms, such as QUAD in the Indo-Pacific, I2U2 in West Asia; Indo-Pacific Economic Framework (IPEF) and India-Middle East-Europe Economic Corridor. Trump 2.0 administration will most likely try to modify a bit to suit its vision and mission and India has to remain prepared in advance.

New era of treatment for GI cancer at Marengo CIMS Hospital in Ahmedabad

Ahmedabad: Marengo CIMS Hospital achieved a ground-breaking feat with the inaugural successful Robotic Gastrointestinal (GI) Cancer Surgery using an Advanced Robotic Surgical System at the hospital in Ahmedabad. This remarkable showcase of clinical expertise represents a major advancement in minimally invasive surgical methods for addressing GI cancers. The surgery was performed by Dr Mahavir Tadaiya, Consultant GI and Gynae Onco-Surgeon, Marengo CIMS Hospital, under mentorship of renowned Surgical Oncologist Dr Somshekhar SP, Aster Medical Centre, Bengaluru. Drawing from over a decade of experience in open and laparoscopic surgeries, our cancer surgeons are taking a progressive stride by adopting advanced Robotic Surgery for cancer patients. This trailblazing procedure underscores Marengo CIMS Hospital's dedication to innovation, excellence, and patient-centered care. Leveraging state-of-the-art robotic technology, the surgical team has achieved unmatched precision and improved outcomes for individuals fighting GI cancer. A decade ago open surgeries requiring large incisions were essential. However, recent advances over the past few decades have brought minimally invasive surgeries, such as Laparoscopy and Robotic surgery, to the forefront of cancer surgery. Ravinder, the 60-year-old male patient, came from out of Gujarat to consult Dr. Mahavir Tadaiya at Marengo CIMS Cancer Centre. His reports indicated left-sided colon cancer. After carefully considering and weighing the benefits and drawbacks of various options, the patient chose Robotic surgery. He underwent a Robotic Colectomy procedure without encountering any intraoperative or immediate postoperative complications. (18-2)

Toyota Kirloskar Motor Unveils "TGLOSS"

Ahmedabad, In line with its 'customer-first' philosophy, Toyota Kirloskar Motor Pvt. Ltd. (TKM) today announced the launch of its revolutionary car care brand, "TGLOSS", marking the brand's foray into the world of car detailing. In response to the rapidly increasing demand for high quality and reliable car care detailing services among customers in India, TKM is set to redefine the car care industry with its comprehensive range of solutions tailored specifically for Toyota vehicles. Starting May 1, 2024, "TGLOSS" treatments will be offered at every authorised Toyota dealership in India. This provides customers with convenient access to quality car care solutions delivered in a highly professional manner, ensuring a delightful ownership experience. As an industry first by any car maker, under the "TGLOSS" brand, TKM will offer a wide array of services curated to enhance a vehicle's appearance, both inside and out. This includes ceramic coating, underbody coating, silencer coating, and internal panel protection. These treatments are not only aimed at enhancing the aesthetic appeal of vehicles but also offers certain degree of protection against environmental elements. (20-4)

Airtel expands its network footprint in Morbi and Rajkot

Ahmedabad, Bharti Airtel, one of India's leading telecommunications service providers, today announced that it has deployed additional sites in Morbi and Rajkot district to densify its network. The network expansion project in Morbi and Rajkot was undertaken across 249 villages covering 4.65 lakh population base. Customers in the tehsils of Rajkot, Morbi, Jasadn, Gondal, Lodhika, Jetpur, Wankaner, Tankara under the Morbi and Rajkot district will directly benefit from this network expansion. The expansion will enable seamless access to high-speed connectivity that will ensure reliable mobile network for work, study and entertainment in rural parts of Morbi and Rajkot. In this year alone, Airtel has doubled down on its commitment to the state and has invested additional capex to enhance its network connectivity for seamless experience on 4G, 5G, Broadband and Fiber. To expand coverage in rural villages in the state and to bring customers to enjoy the power of high-speed connectivity, the rural expansion project covers fifteen districts of Gujarat including Bharuch, Gandhinagar, Mehsana, Banaskantha, Surat, Ahmedabad, Kheda, Bhavnagar, Botad, Anand, Rajkot, Morbi, Vadodara, Sabarkantha and Patan, impacting over 50 lakh population across these districts.
