Key Highlights

Performance Highlights – Quarter & YTD

Given the seasonality in the business, it is best monitored on an annual basis

Performance Highlights – H1FY23

Key Highlights

- ✓ The country overall received 7% more rains than the long-term average during the 2022 June-September monsoon season, however, overall trends of monsoon spread was erratic
- ✓ While central and southern peninsula regions received higher precipitation during the monsoon, north-west and eastern India received deficit rainfall, impacting the kharif crop coverage
 - As a result of uneven rains, sowing has remained mixed, with overall acreage being lower by about 1% of the normal area
- ✓ While the acreage under paddy, pulses and oilseed was lower for the season, cotton and coarse cereals saw an increase in the coverage
 - The area under paddy, which drives substantial agrochemical consumption, has dropped by 4.8% as compared to last year
- ✓ Rainfall in September and October 2022 has helped in enhancing the soil moisture. Good soil moisture and water reservoir levels augur well of upcoming rabi season
- ✓ **3 insecticide, 1 fungicide, 1 metal phosphide and 3 PGR products launched during H1FY23**
- ✓ There has been an uptick in exports, and recent capacity expansion investments should help sustain this encouraging trend
- ✓ Given the smoothening of supply chain and lower input costs, we have started decreasing our inventory levels to pre-Covid period
- ✓ We continue to focus on liquidation, cost optimization, and robust evaluation of new product pipeline advancements as we analyze our portfolio and identify product and region gaps

New Product Launches

*Company launched 3 unique proprietary 9(3) products – **Sumi Blue Diamond, Pyclore and Danitol NXT** during the National Level and Regional Level Trade Channel Partners' Meeting*
