‘No assurance on a safe vaccine yet’

Goutam Das
goutam.das@livemint.com
NEW DELHI

The Centre is preparing for a mass immunization drive in 2021, provided a covid-19 vaccine is ready by then. The initial steps are based on a few assumptions, simply because there are many unknowns, said K. Srinath Reddy, president, Public Health Foundation of India. Edited excerpts from an interview:

What are the assumptions as India prepares for the immunization programme for covid-19?

The assumptions are that we are going to have a safe and effective vaccine and that we will get it soon. While there are over 200 vaccine candidates at different stages of development, nine are in a fairly advanced stage. We can expect some of them to be successful. But there is no assurance yet. Unless we see the results, it would not be proper to conclude that we are definitely going to get a vaccine. Assuming we get a vaccine, the next question is whether it is going to be an India-developed vaccine or internationally developed, for which India is contracted for manufacturing. That question would determine how much of the vaccine we will have access to on our terms. For an internationally-developed vaccine, it depends on how we negotiate the contracts.

If we do get the vaccine, what will be the pecking order for immunization?

There are groups where there is no dispute—health workers and other essential workers, including the police, armed forces, sanitary workers, pilots and airline crew, train drivers, and anyone involved in the transport of essential goods. You also have to include school teachers. Then comes the question of identifying people who are at high risk. If you are trying to protect the elderly first, those above 60 years and people with co-morbidities, it is going to be a little tricky because we know that people who have illnesses such as hypertension, diabetes, cardiovascular and respiratory diseases are not always aware of it, or are not declared to the health system. That does introduce an element of inequity because people who are

Apart from essential workers, the young will also have to be immunized on a priority because they are the virus disseminators.

K. Srinath Reddy
President, PHFI

more aware are likely to be urban and educated, or relatively affluent.

But what about the people who are not detected by the system yet? We may have to go by the age criteria—above 60, above 55, above 50, etc. There is another tricky question. Are you going to look at people who are at risk or who are spreading the virus the most? If you turn the question on its head, then the young will also have to be immunized on a priority because they are the virus disseminators.

What are some of the other challenges?

Challenges of distribution, keeping supply chains going and making sure there are no stock-outs. But who will administer? Asha workers are not permitted to do that. Supply-chain logistics will be less of the problem; human resources will be the larger problem.

A NOBEL FOR YOUR BLACK HOLE THOUGHTS

A MATTER OF NUMBERS
DILIP D'SOUZA

Respond to this column at
feedback@livemint.com

India prepares to induct more Rafale fighter jets amid China border issue
bit.ly/352hAlq

Black holes are in the news, and I could hardly be more excited. As phenomena in our universe go, these are about the strangest. Now we have pulsars and supernovas and fast radio bursts out there, and each of them defies the imagination in different ways. But black holes first fascinated me for this reason: they were theoretically conjectured before we actually managed to detect them.

They are in the news because three scientists have shared this year's Nobel Prize in Physics for their work on black holes. Roger Penrose gets half for showing that black holes must exist—as Albert Einstein's general theory of relativity predicted. Andrea Ghez and Reinhard Genzel share the other half for their discovery of a vast black hole not particularly far from us, as celestial distances go: it's at the centre of our Milky Way galaxy.

But what does it mean to predict that black holes exist?

Or let's start by wondering just what is a black hole? I explored that in this space some years ago ("Stop the world and let me off", 16 February 2012), but with this Nobel news, let's explore a bit more.

We can think of a black hole as just another celestial object, which is usually OK. But it is not an object in the sense of being tangible, or even visible. It has no "surface" or "boundary" like the Earth, and the Sun do. Consider it, instead, as a certain volume of empty space that has a gravity all its own. Realize that's hard to imagine, but if you follow the logic of its birth, it makes complete sense.

The thing is, that particular region of space used to contain a more tangible object—a star. The star collapsed on itself, succumbing to its own gravitational attraction. This is a vicious cycle because the star's contraction strengthened its gravitational power, and that pulled the material in even more. This "gravitational collapse" of the star eventually could not be stopped, and the material making up the star fell below what's known to black hole theorists as an "absolute event horizon". And it is this horizon that defines a black hole.

Again, this is not a horizon as you know it, nor

a physical surface of any kind. This is a purely mathematical construct that gives us the radius of the black hole. Outside it, it is still possible for objects to evade this once-star's gravitational tug. Inside that horizon, nothing at all can escape. That's a black hole.

But let's take a step back to ask, how and why would a star collapse like this? Take our Sun. It's now about 4.5 billion years old, and will probably shine for another 3 billion years. We know enough about the evolution of stars to predict what it will do when those years have passed. In its death throes, it will first expand hugely, swallowing up at least its first three planets—yes, that means us on Earth—and perhaps Mars as well. But this "red giant" phase won't last. Broadly: As its fuel starts running out, it will run out of the energy that counteracts its gravity and keeps it enormous. It contracts dramatically, pulled in by its own gravity. The theory is that it will shrink to become a "white dwarf"—about the size of the Earth. Think of our entire Sun, with all its gases and minerals, now packed into a globe one hundredth its original diameter. Put it another way: this is a body about 500,000 times heavier than the Earth, now packed into an Earth-sized sphere. What if you filled a matchbox with stuff dug from this white dwarf? The stuff is so dense that the little box will weigh several tonnes. You can imagine just how strong gravity would be on this white dwarf.

Gravitational force is so strong in a black hole that not even light can escape

Principle. This tells us that you cannot push electrons closer together than a certain limit, even with the enormous gravity of a white dwarf. When that limit is reached, the star stays as a white dwarf and then slowly cools down and turns into another enormous but dead rock out there.

But as strange as a white dwarf is, it is not a black hole. The great physicist S. Chandrasekhar asked: Is it possible that a star, more massive than the Sun, might collapse on itself so much so that its gravity will overcome even the force that keeps electrons apart, implicit in Pauli's Exclusion Principle? His answer: Yes. It only needs to be about 1.4 times heavier than the Sun—a number that's known as the Chandrasekhar limit. A star more massive than this will overwhelm the Pauli Principle and compress till it is only a few kilometres in diameter. Many million times more dense than a white dwarf, this is known as

a neutron star.

Still not a black hole, though! Particularly massive neutron stars—a few dozen times heavier than our Sun, for example—are subject to such extreme gravity that they contract still further, to the point where the material in the star falls below that absolute event horizon. Now, none of it can escape. At this point, we have a black hole.

Newton's theory of gravitation is no longer able to explain this object's behaviour. To understand, physicists have to use Albert Einstein's general theory of relativity.

That's beyond what I can put into this column, but nevertheless, some broad brush strokes. Einstein theorized the idea of spacetime, and how it is like a vast canvas on which sit massive objects like planets and stars. They bend the canvas to different degrees, depending on their mass. Light, he predicted, would follow this curvature of spacetime, and we have actually observed this happening (look up "gravitational lensing"). The more massive the object, the more it "bends" light. And what if we have a black hole? A passing ray of light bends towards it, strays past that event horizon—and then?

Think of it like this: to escape the Earth's gravity and fly off into space, we would need to accelerate to the Earth's "escape velocity": about 11 km per second. Anything slower, and we'd be stuck to our planet (as you and I are). On larger Jupiter, with its far stronger gravity, the escape velocity is about 60 km per second. Well, what if we have an object whose gravitational force is so strong that its escape velocity is greater than the speed of light, 300,000 km per second?

On such an object, not even light can escape. Take a moment to grasp that. That, folks, is a black hole.

In a 1973 lecture, Roger Penrose himself told us about a "blue supergiant" star in the constellation Cygnus, HDE 226868, which is about 30 times more massive than our Sun. What's special about this star, though, is not its size. Instead, it orbits around a "mysterious companion" that's half its weight, but only about—get this—50 km across. That companion, Penrose suggested, is a black hole.

Ghez and Genzel found something similar in the Milky Way. About that, another time. But let me leave you with this thought from Tom McLeish, a professor at the University of York: "Penrose, Genzel and Ghez together showed us that black holes are awe-inspiring, mathematically sublime, and actually exist."

Spare some awe, today, for that sublimity. Once a computer scientist, Dilip D'Souza now lives in Mumbai and writes for his dinners. His Twitter handle is @DeathEndsFun

Fashion, beauty to drive e-com sales this festive season

Tarush Bhalla
tarush.b@livemint.com
BENGALURU

Fashion and beauty categories are seen dominating consumer spending when Flipkart, Amazon and other top online retailers in the country start their festive season sales from Friday.

A consumer sentiment survey by management consulting firm RedSeer showed that as many as 80% consumers are looking to spend on fashion categories during the sales. Out of this, 34% customers plan to raise their spending on fashion. In comparison, just 21% customers will consider increasing their spending on smartphones, according to the report released on Thursday.

Flipkart, which kicks off its Big Billion Days (BBD) sale on Friday, has partnered more than 100 brands to bring 2,000 fashion stores on to its platform, serving customers more than 300 cities. The BBD sale went live for Flipkart Plus customers on Thursday.

Over the past months, the Walmart-owned company has also partnered with several value fashion brands such as Bata and Max Fashion to cater to the changing budgets of customers in tier-II regions.

"We will continue to bridge the gap between customers in metros and tier-II+ regions, where customers are seeking the best of current fashion trends, but have limited access from a selection, range and affordability perspective," said Flipkart in a statement.

On the other end, Amazon India has changed gears this year to focus on a large group of small and medium businesses (SMBs) to give a boost to the seller market, while dou-

Flipkart has tied up with many value fashion brands.

bling down on assortments via this strategy.

Amazon India will kick off its Great Indian Festival sale on Saturday, with its Prime members getting access to the sale a day prior.

On an average, close to 90% of consumers surveyed by RedSeer said they will be shopping during this festive sale. An additional 10% customers from metro cities are also expected to shop online during this year's sales, it said.

While mobile phone sales are expected to stay muted in the ₹12,000-15,000 price

A RedSeer survey found that 80% of consumers are looking to spend on fashion categories during the festive sales

range, fashion consumers will be willing to spend close to ₹5,000 on an average, it said. "This year, the consumer sentiment says that individuals might not trade up for a premium model, under the smartphone category, and focus on value brands. Also, with supply chain constraints, total dollar value of smartphone sales will not increase much, while electronics and appliances may do well," said Mrigank Gutgutia, director, e-commerce, RedSeer.

The first festive sale event of this year is expected to garner a gross merchandise value (GMV) of \$4 billion, RedSeer had predicted earlier.

NOTICE

Transfer of Equity Shares of the Company to Investor Education and Protection Fund (IEPF) Authority

Notice is hereby given that pursuant to the provisions of Section 124 of the Companies Act, 2013 (the Act) read with the Investor Education and Protection Fund Authority (Accounting, Audit, Transfer and Refund) Rules, 2016 (the Rules), as amended , the Equity Shares of the Company in respect of which dividend has remained unclaimed or unpaid for a period of seven consecutive years or more are required to be transferred by the Company to the demat account of the IEPF Authority.

The Company has sent individual notices to the concerned Shareholders who have not claimed the dividends for the last seven years starting from 2012-13 onwards, at their registered addresses whose shares are liable to be transferred to the IEPF Authority advising them to claim their dividends. The Company has uploaded details of concerned shareholders whose shares are due for transfer to the IEPF Authority on its website www.indsil.com. Shareholders are requested to refer to the said website to verify the details of unclaimed dividends and the shares which are liable to be transferred to the IEPF Authority.

The Concerned Shareholder(s) holding shares in physical form and whose shares are liable to be transferred to the IEPF Authority, may note that upon transfer of shares to IEPF Authority, the original share certificate(s) which are registered in their name will stand automatically cancelled and be deemed non-negotiable. In case of shares held in Demat form, to the extent of shares liable to be transferred, shall be debited from the shareholders account.

In case the concerned shareholders do not claim their unclaimed dividends by 14th January, 2021 the Company shall with a view to comply with the Rules, transfer the shares to the IEPF Authority without any further notice to the Shareholders and no liability shall lie against the Company in respect of the shares so transferred.

The Shareholders may note that upon transfer of shares to IEPF Authority, including all benefits accruing on such shares, if any, the same can be claimed only from the IEPF Authority by making a separate application to the IEPF Authority in Form IEPF-5 as prescribed under the Rules and the same is made available at IEPF website i.e www.iepf.gov.in.

For any queries in respect of the above matter, shareholders may contact M/s. S.K.D.C. Consultants Ltd, the Registrars and Share Transfer Agents of the Company at " Kanapathy Towers ", 3rd Floor, 1391/A-1, Sathy Road, Ganapathy, Coimbatore - 641006.
