

Max Financial Performance Update

Investor Release H1 FY20

6th November, 2019

India's Best Companies **
To Work For 2018

THE ECONOMIC TIMES

SECTION I

► Max Financial Services : H1FY20 Key Highlights

FINANCIAL Max Financial Services: H1FY20 Key Performance Highlights

- 1
- Consolidated Revenue* at **Rs 8,635 Cr,** grows **10%.** Consolidated PAT at **Rs 119** Cr, down **25%,** due to shift in product mix towards NPAR savings (increase from 5% in H1FY19 to 20% in H1FY20) and investments in proprietary channels

- 2
- MCEV as at 30th Sep 2019 at Rs. 9,745 Cr, grows 26% y-o-y; Operating RoEV (annualised) at 18.3% in line with the previous year

- 3
- VNB (post overrun) has grown 25% to Rs 364 Cr. Structural NBMs (pre cost overrun) have expanded by 170 bps to ~25% and Actual NBMs (post cost overrun) also expands by 60 bps to 21%, driven by increased focus on Non-Par savings

- 4
- Max Life has outperformed the industry growth on Individual APE by growing 22% to Rs 1,717 Cr vs private insurers growth of 16% with market share expanding by 51 bps to 9.3%

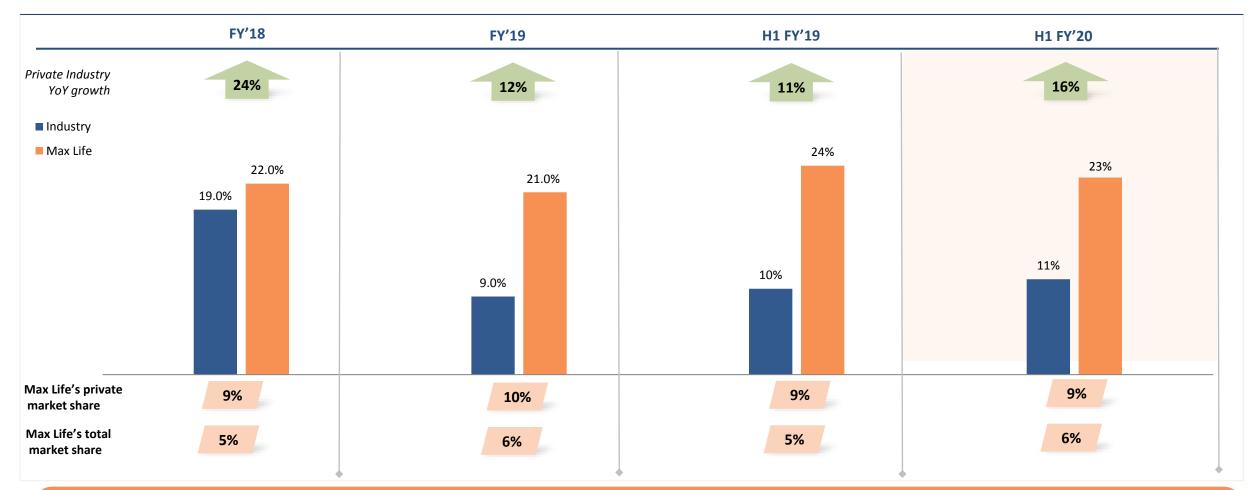

SECTION II

► Max Life Insurance – Business Overview

Industry Landscape (H1 FY'20): Total Industry grew by 11%, while Pvt. players grew by 16% and LIC by 5%)

YoY Growth basis Individual Adjusted FYP

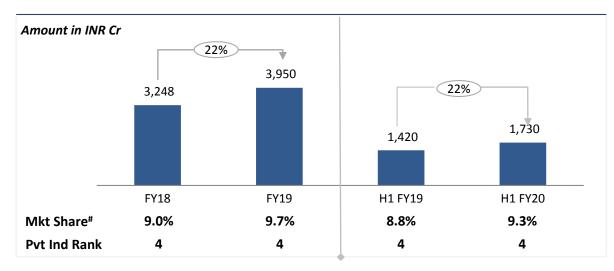

Max life continues to demonstrate predictable and sustainable growth rate trajectory in line with our strategy.

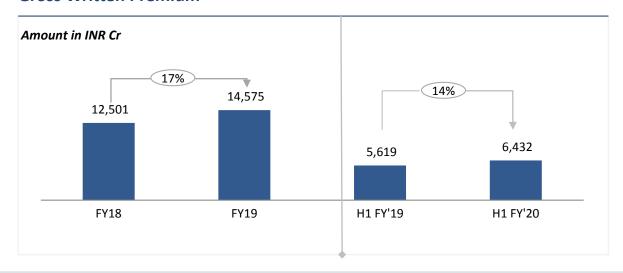

Max Life has delivered strong performance on both new business and renewal business; Maintained 4th rank in the private industry

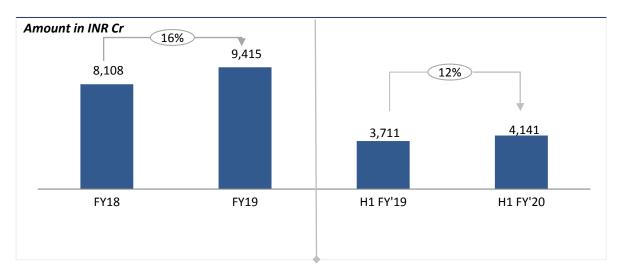

New Business Premiums (on APE basis)

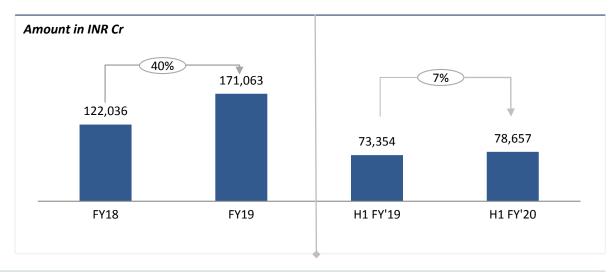

Gross Written Premium

Renewal Income

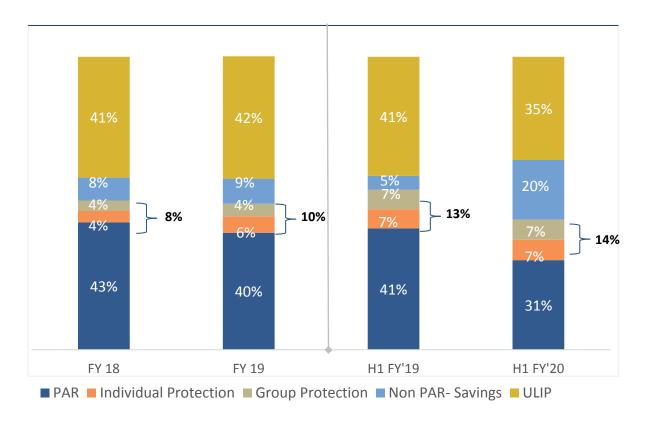

Individual Sum Assured of New business

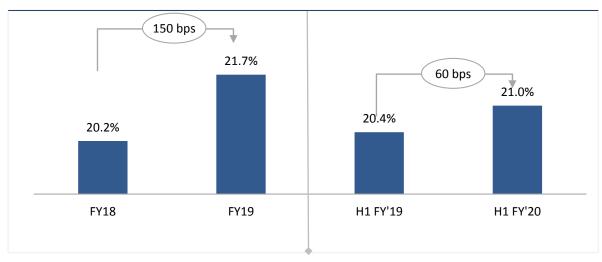

25% growth in VNB with H1 margins at ~21% driven by increased focus on Non Par Savings

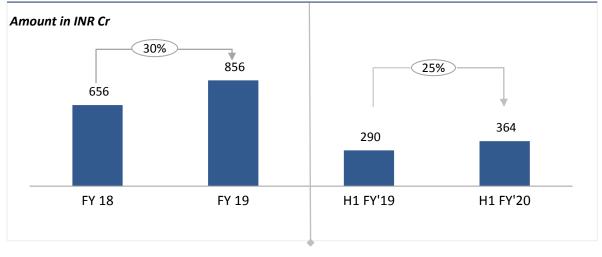

Product Mix – Shift towards NPAR savings mix increased by 1500 bps to drive margin expansion. Individual Protection mix grew by 44 bps, while the Group Protection mix grew by 14 bps

Margins (post-overrun)*#

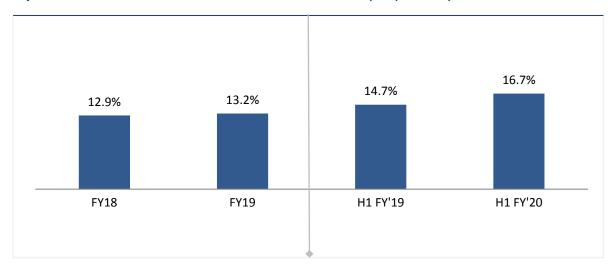

VNB (post over-run)*#

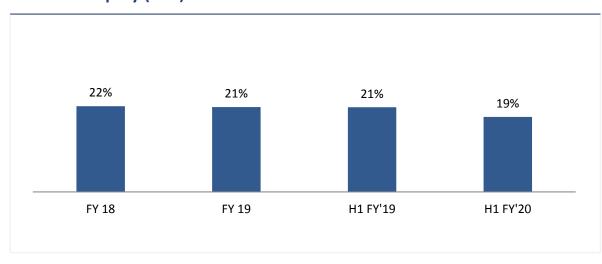

MAX LIFE INSURANCE

Efficient capital management with consistent RoE of ~20%... among the best in financial services

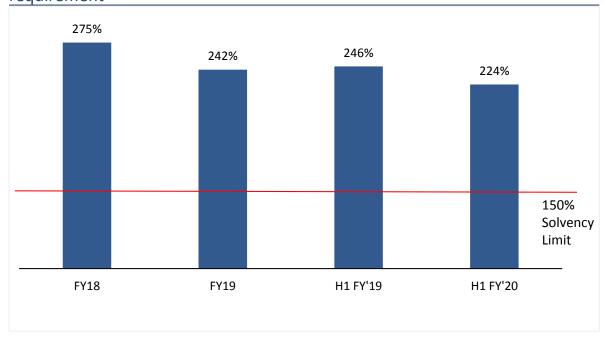

Opex to GWP* - Increase due to investment in proprietary channels

Return on Equity (RoE)# - Consistent ROE

Solvency Ratio (pre dividend) - maintained well above the regulatory requirement

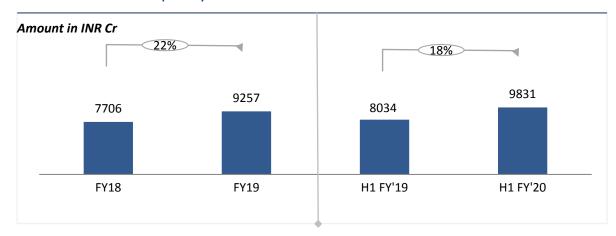

^{*} Refers to the policyholder expense to GWP ratio; # ROE is PAT as a ratio of average Net worth during the year

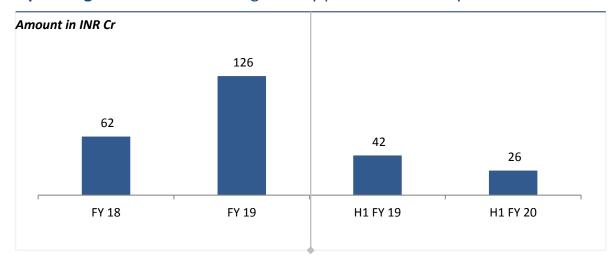

Operating RoEV for H1FY20 at 18.3%(annualised) in line with H1FY19

Embedded Value (EV)* - EV has grown at 18% driven by growth in value of new business and quality of inforce business

Operating Variance - has been generally positive over the years

Operating Return on Embedded Value - RoEV at ~18.3% in H1FY20

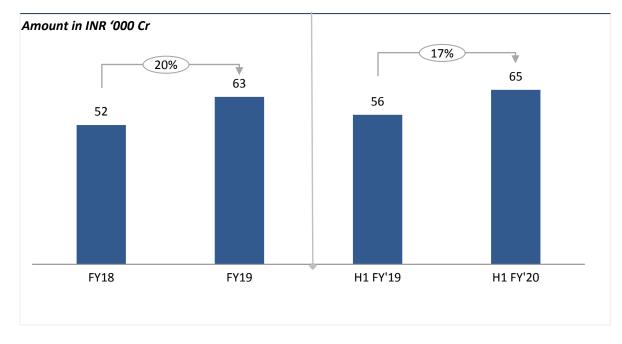

Sensitivity – One of the least among competition due to balanced product mix

lkom	Embedd	ed Value	Value of New Business			
Item	-10%	10%	-10%	10%		
Lapse / Surrender	-1%	2%	4%	-4%		
Mortality	-2%	2%	5%	-5%		
Expense	-1%	1%	7%	-7%		

Max Life has consistently grown its Asset Under Management

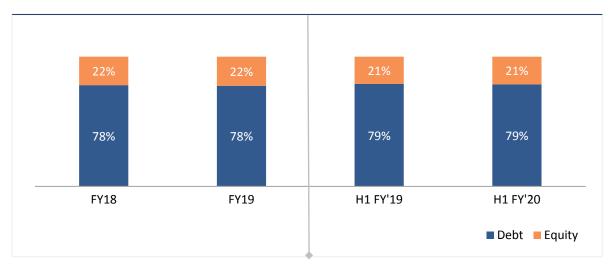

Assets Under Management - MLI is the 4th largest manager of LI AUMs

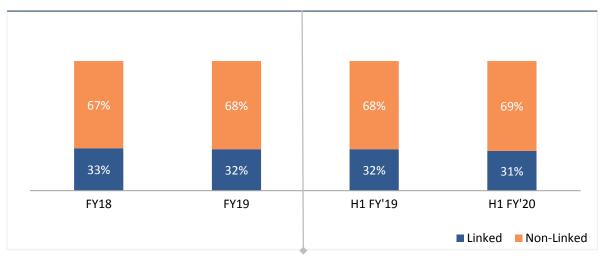

With PAR AUM at ~35,000 Cr. (Sep'19), Max Life has the highest PAR AUM in the private industry. ULIP's Debt: Equity share is 49:51

Debt-Equity Mix - Healthy mix of Debt and Equity on an overall level

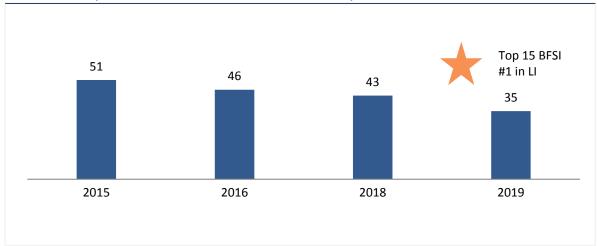

Fund Type (Linked vs Non-linked)

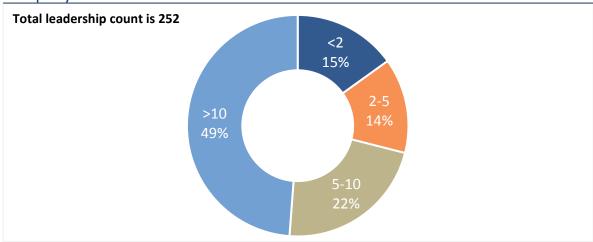

Unwavering focus on leadership strength and has a vintage employee pool, both of which are critical for success in long term businesses such as Life Insurance

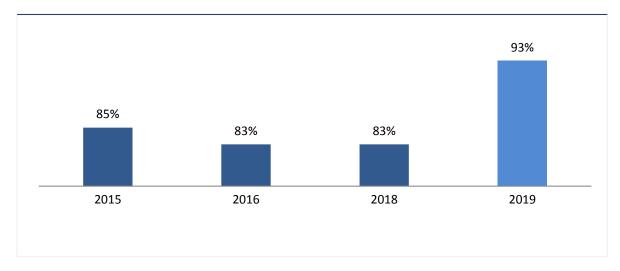

Great Place to Work Survey - Only Life insurance Company amongst Top 100 India's best place to work for in 2019; rank improved since 2015

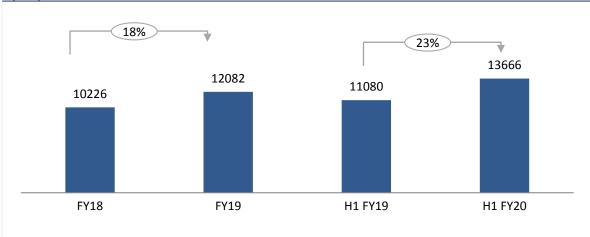

Leadership Experience - Almost half the leadership has been with the company for more than a decade*

Employee Engagement^ - Consistently amongst top decile

Headcount - In line with the growth aspirations, headcount has been ramped up by 23% in H1 FY20

Max Life has been recognised by a number of Indian and foreign business bodies for its excellence in business, customer service and focus on people

nd .

- Winner of CII Industry Innovation Award
- Outlook Money Award for Best Life Insurer
- Most Admired BrandBy White Paper International
- Economic Times Best Brands 2016
- Golden Peacock award for Corporate Governance
- Silver Award at the ACEF 8th Global Customer Engagement Awards 2019 in the BTL Activities Category.

- No. 1 in Customer Loyalty survey by IMRB
- Gold at ASQ World Conference
- Winner of IMC Ramkrishna Bajaj National Quality Award
- Winner of CII Industry Innovation Award
- Asia Pacific Quality Organization (APQO) award for global performance excellence

 Silver Award in ASQ ITEA 2019 for Sell Right for Customer Delight at Axis Bank

 At CMO Asia Awards , won Best Term Plan Company of the Year

Focus on People

- Ranked 35th India's Best Companies to work for in 2019. Best in Insurance industry
- Top 20 BFSI companies to work for by Great Place to Work Institute
- India's Top 75 Workplaces for Women by Great Place to Work Institute
- Employee Engagement Leadership Award for "Best use of the Employee Award"
- Employee Engagement
 Leadership Award for "Best Social Responsibility"

SECTION III

► Max Life Insurance – Strategy FY19-22

Max Life embarked on its journey of 25%+ VNB growth, 25% NBM and 25% ROEV aspirations by FY22. Key strategic elements to achieve the vision

Predictable & Sustainable growth

- Deepen Bancassurance partnerships
- On-board new distribution partners
- Scale up existing proprietary channels
- Opportunistic play for inorganic growth

Product innovation to drive margins

- Increase protection penetration
- Drive Non PAR saving
- Tap into new growth opportunities like health and retirements
- Enhanced investment and mortality risk management

Customer centricity across the value chain

- #1 position in 13M and 61M persistency
- Highest Relationship Net Promoter Score (NPS) in the industry

Digitization for efficiency and intelligence

- Continue with digitization agenda across the organisation
- Build intelligence (AI) in all digital assets
- Minimize back-office costs

- Achieve 25%+ VNB growth rate
- Increase share of proprietary channels sales to ~35%
- Continue growing highly productive agents (premium >10 lakhs per annum) by 20%+ CAGR

- Achieve ~25% new business margin and consequently ~25% RoEV
- Achieve protection penetration of 14%+ and NPAR savings penetration of 13%+
- Improve 13M persistency to 88%+ and 61M Persistency to 58%+
- Leaders in NPS in the sector

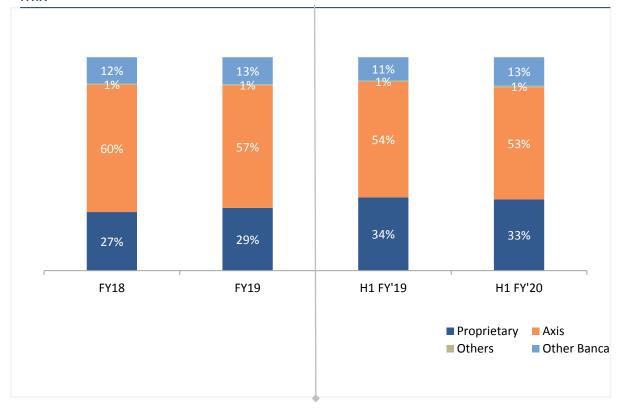

- Achieve 90%+ Insta-issuance
- Self-service transactions to exceed 90%

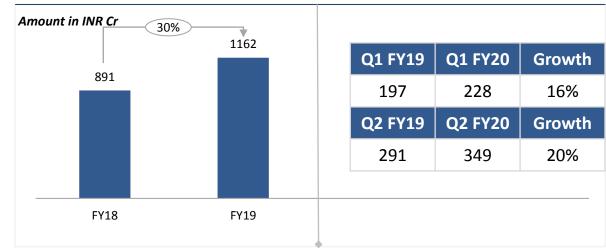

Max Life has focused on ensuring growth in both its Proprietary and Bancassurance channels

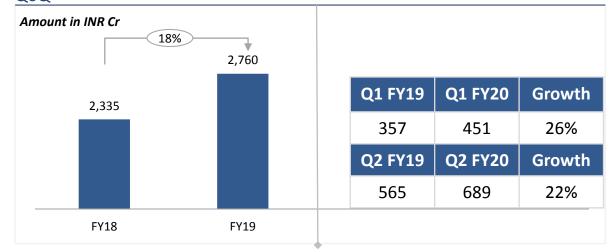

Channel Mix - Max Life has focused on maintaining a balanced distribution mix

Proprietary Channels New Business (APE) – Higher sales growth in proprietary in Q2 as a result of agency restructuring.

Bancassurance Channel (APE) – Maintaining around 20% growth in Banca QoQ

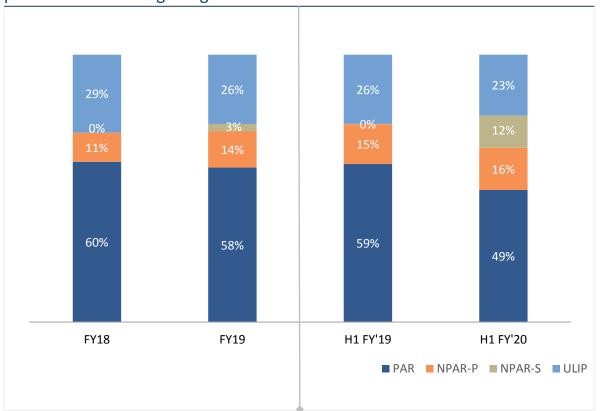

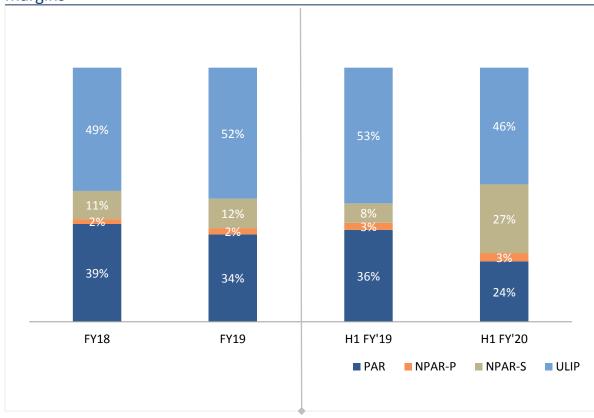

Product mix proprietary and Bancassurance channels aligned to customer needs; future focus to be on driving balanced product mix

Proprietary Channels Product mix - biased towards traditional products and protection for driving margins

Bancassurance Product Mix – focused on increasing NPAR Savings to drive margins

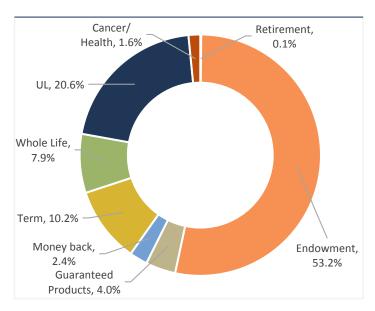

Max Life has a complete suite of products and focus is on selling longer term products along with improving penetration of pure protection offerings

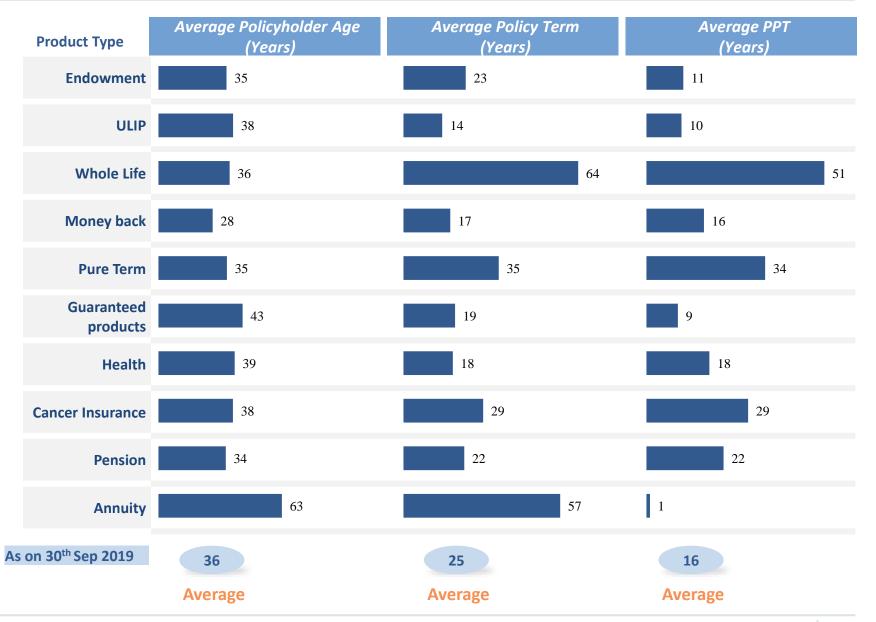

Max Life has products across all categories

Current portfolio¹ biased towards traditional products

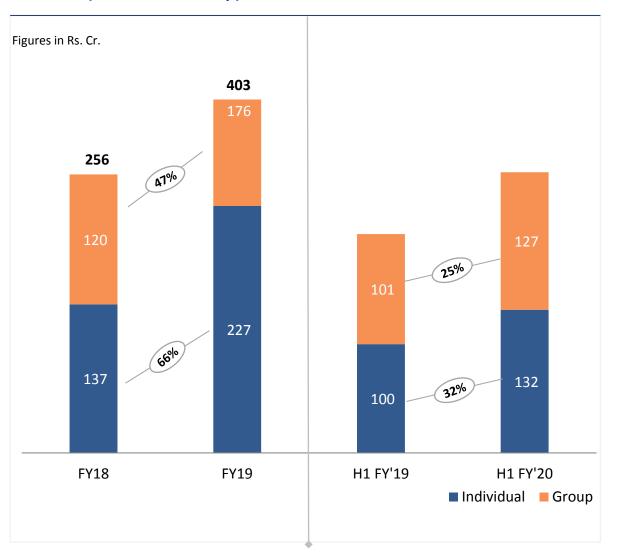

(1) Based on all policies sold till date Investor Release 17

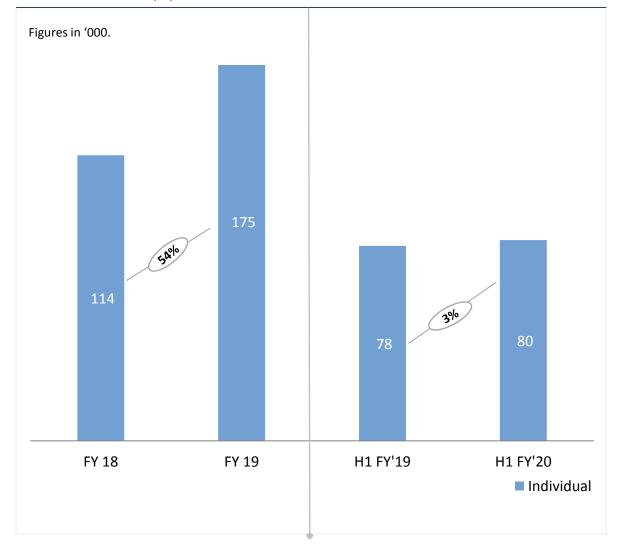

Focus on Protection: 32% increase in individual protection APE, 30% of total individual policies are pure protection

Total APE (Individual + Group)

No of Protection Policies (Individual)- Lower NoP growth in H1 FY 20 due to introduction of limited pay term

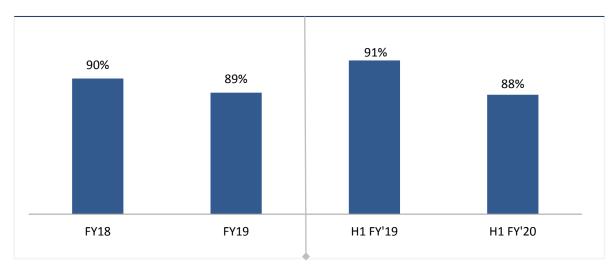

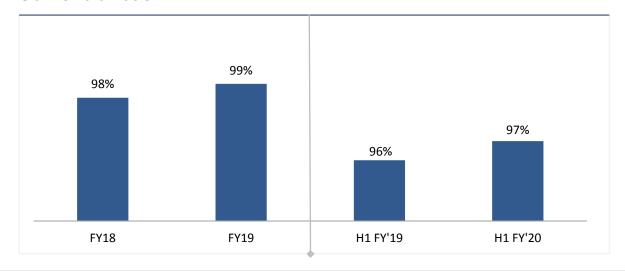

Strong focus towards customer measures has helped deliver superior performance across health parameters and will continue to remain an important priority

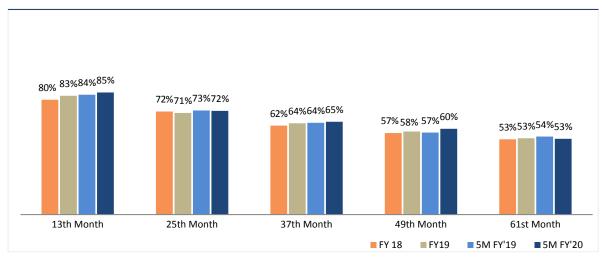

Conservation Ratio

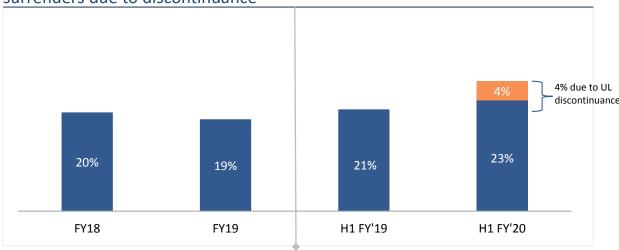

Claims Paid Ratio

Persistency^

Surrender to GWP- Higher Surrenders due to higher payouts w.r.t. UL surrenders due to discontinuance

Significant elements of the value chain digitized, focus remains to leverage digitization & AI for augmenting efficiencies

Digital building blocks in end-to-end customer journey deployed at Max Life

	Agent Onboarding	Sourcing	Application Processing	Underwriting	Verification	Issuance	Account service	Collection
•	Digital Recruitment	Multi-platform, mobility enabled applications	Digital data capture	Automated rule engine	Digital verification	Concise and digital policy packs	Automated Al based	Multiple digital payment options (incl. ECS)
•	Agent Onboarding	Pre-approved/ pre-qualified	Integration with partner banks (for data)	Automated credit score check & income assessment	Video based ◆ verification / Face match	◆ eIA	service mgmt through email bots and predictive IVRs	Scheduled customer reminders
•	Online Training	Conversational interfaces (chatbots, voice) Proprietary lead management system	voice) OCR & QR readers digitization (OCI Finished / Integration with		Analytical models to drive enhanced verification & identify frauds	Digitized delivery of policy document via DigiLocker, Whatsapp		◆ collection management
			Automated dedupe	◆ TeleMedicals				
			eMandate for recurring payments	Automated field investigation				
			Digital payment capabilities	Analytical models to drive enhanced underwriting				

On track to deliver 2-3x improvement in TATs across processes along with spend base rationalisation of 15-20%; All the above initiatives expected to go-live in FY 20

SECTION IV

► Max Life Insurance – MCEV Disclosures: H1 FY'20

Key Results

The Embedded Value¹ (EV) as at 30th September 2019 (post allowing for proposed interim shareholder dividend) is **Rs 9,745 Cr.** Before allowing for proposed interim shareholder dividend, the EV is **Rs 9,831 Cr**.

The annualized Operating Return on EV^2 (RoEV) over H1 FY20 is **18.3%**. Including non-operating variances, the RoEV is **21.0%**.

The New Business Margin (NBM) for H1 FY20 is **24.6**% (before allowing for acquisition operating cost overrun) and **21.0**% (post overrun). The Value of New Business (VNB) written over the period is **Rs 364 Cr** (post overrun), representing year on year growth of **25**%.

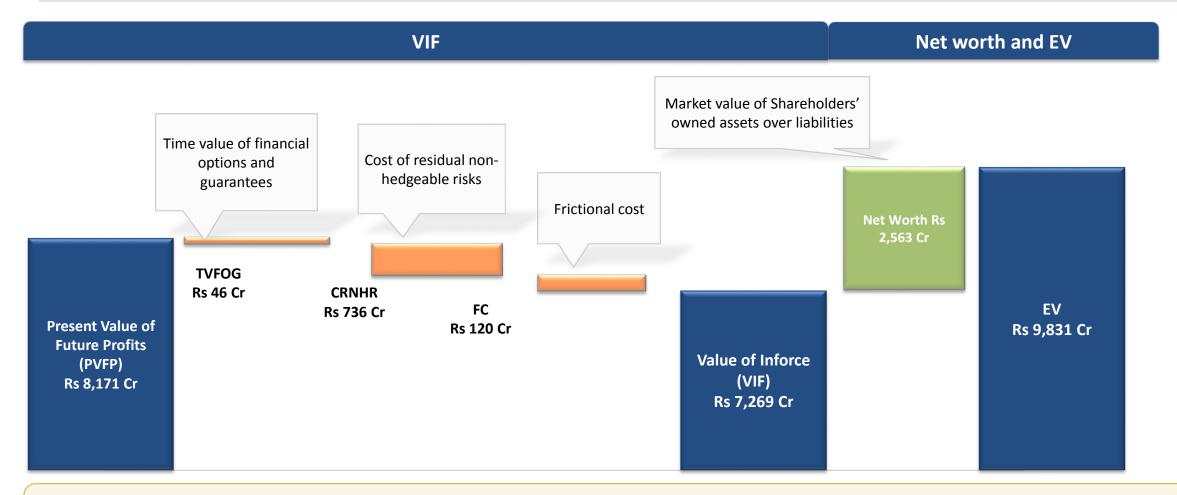

Notes:

¹ Max Life's Embedded Value (EV) is based on a market consistent methodology. However, they are not intended to be compliant with the MCEV Principles issued by the Stitching CFO Forum Foundation (CFO Forum) or the Actuarial Practice Standard 10 (APS10) as issued by the Institute of Actuaries of India.

² The Return on EV is calculated before capital movements during the year e.g. dividends.

- 1. The deductions for risks to arrive at the VIF represent a reduction of ~11% in the PVFP. The largest deduction is in respect of CRNHR.
- 2. Within CRNHR, persistency risk constitutes the largest risk component.

Value of New Business and New Business Margins as at 30th September 2019

Description	H1 FY19	H1 FY20	Y-o-Y growth
APE ¹	1,420	1,730	22%
New Business Margin (NBM) (before cost overrun)	22.9%	24.6%	+170 bps
New Business Margin (NBM) (post cost overrun)	20.4%	21.0%	+60 bps
Value of New Business ² (VNB) (post cost overrun)	290	364	25%

- The New Business Margin (NBM) before cost overrun has increased by circa 170 bps to 24.6% for H1 FY20 compared to 22.9% for H1 FY19.
- The increase in margins is primarily driven by increase in proportion of non-par business.
- Post allowing for acquisition operating cost overrun chargeable to shareholders, the NBM reduces to 21.0%.

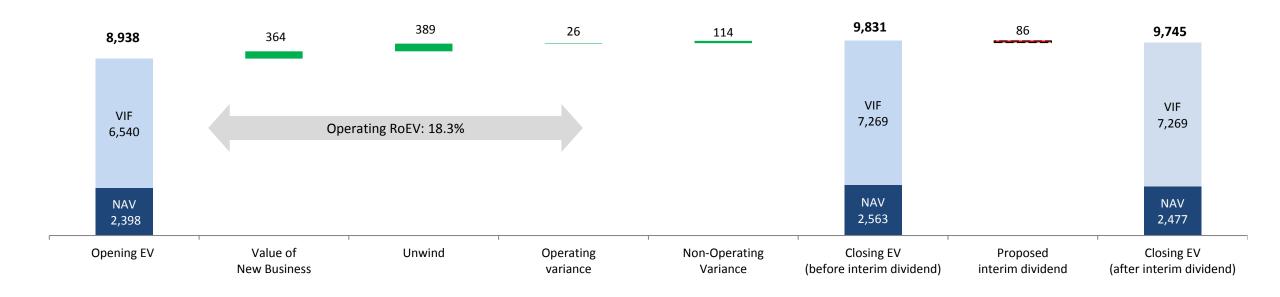

Investor Release Note: Figures in Rs Cr.

¹ Annual Premium Equivalent (APE) is calculated as 100% of regular premium + 10% of single premium.

² The VNB is accumulated from the point of sale to the end of the reporting period (i.e. 30th September 2019), using the beginning of quarters' risk free yield curve.

EV movement analysis: March 2019 to Sep 2019

- Operating return on EV of 18.3% is mainly driven by new business growth and unwind.
- Non-operating variances are mainly driven by positive variance as a result of use of lower cost of capital charge in estimating CRNHR and economic variances.
- The proposed interim shareholder dividend of Rs 86 Cr will be accounted post 30th September 2019. Post the payment of interim dividend, the closing EV will be Rs 9,745 Cr.

Sensitivity analysis as at 30th September 2019

Figures in Rs Cr.

	E	:V	New business		
Sensitivity	Value (Rs Cr)	% change	VNB (Rs Cr) NBM	% change	
Base Case (before final SH dividends)	9,831	-	364 21.0%	-	
Lapse/Surrender - 10% increase	9,691	(1%)	351 20.3%	(4%)	
Lapse/Surrender - 10% decrease	9,979	2%	378 21.8%	4%	
Mortality - 10% increase	9,677	(2%)	346 20.0%	(5%)	
Mortality - 10% decrease	9,987	2%	382 22.1%	5%	
Expenses - 10% increase	9,741	(1%)	338 19.5%	(7%)	
Expenses - 10% decrease	9,923	1%	390 22.6%	7%	
Risk free rates - 1% increase	9,690	(1%)	373 21.6%	3%	
Risk free rates - 1% reduction	9,903	1%	334 19.3%	(8%)	
Equity values - 10% immediate rise	9,905	1%	364 21.0%	Negligible	
Equity values - 10% immediate fall	9,648	(1%)	364 21.0%	Negligible	
Corporate tax Rate - 2% increase	9,651	(2%)	353 20.4%	(3%)	
Corporate tax Rate - 2% decrease	10,012	2%	375 21.6%	3%	
Corporate tax rate increased to 25%	8,611	(12%)	293 16.9%	(20%)	

- 1. Reduction in interest rate curve leads to an increase in the value of assets which offsets the loss in the value of future profits.
- 2. Risk free rate sensitivities under new business allow for the change in the value of assets as at the date of valuation

SECTION V

► Max Life Insurance – Financial Performance

Financial Performance Summary H1 FY'20

Pvt Market Share 9.3% [8.8%] 51 bps	Individual APE Rs 1,730 Cr [Rs 1,420 Cr]	Gross Written Premium Rs 6,432 Cr [Rs 5,619 Cr]	AUM Rs 65,425 Cr [Rs 56,070 Cr]

i) Sum insured in force	Rs. Crore				616,528	8,25,875	34%
j) Grievance Ratio	Per Ten thousand				72	65	

^{*} Profit before tax is lower compared to previous year due to increase in NPAR savings business from 5% in H1 FY19 to 20% in H1 FY20 and investments in future growth

Annexure

Definitions of the Embedded Value (EV)

Market consistent methodology

- The EV and VNB have been determined using a market consistent methodology which differs from the traditional EV approach in respect of the way in which allowance for the risks in the business is made.¹
- For the market consistent methodology, an explicit allowance for the risks is made through the estimation of the Time Value of Financial Options and Guarantees (TVFOG), Cost of Residual Non-Hedgeable Risks (CRNHR) and Frictional Cost (FC) whereas for the traditional EV approach, the allowance for the risk is made through the Risk Discount Rate (RDR).

Components of EV

The EV is calculated to be the sum of:

- Net Asset value (NAV) or Net Worth: It represents the market value of assets attributable to shareholders and is calculated as the adjusted net worth of the company (being the net shareholders' funds as shown in the audited financial statements adjusted to allow for all shareholder assets on a market value basis, net of tax).
- Value of In-force (VIF): This component represents the Present Value of Future expected post-tax Profits (PVFP) attributable to shareholders from the in-force business as at the valuation date, after deducting allowances for TVFOG, CRNHR and FC. Thus, VIF = PVFP TVFOG CRNHR FC.

Covered Business

All business of Max Life is covered in the assessment except one-year renewable group term business and group fund business which are excluded due to their immateriality to the
overall EV.

1 The EV as at March 2015 was reviewed by external consultant (Milliman) and their opinion was shared along with the disclosure at March 2015. This disclosure follows the same methodology.

Components of VIF (1/2)

Present Value of Future Profits (PVFP)

- Best estimate cash flows are projected and discounted at risk free investment returns.
- PVFP for all lines of business except participating business is derived as the present value of post-tax shareholder profits from the in-force covered business.
- PVFP for participating business is derived as the present value of shareholder transfers arising from the policyholder bonuses *plus* one-tenth of the present value of future transfers to the participating fund estate and one-tenth of the participating fund estate as at the valuation date.
- Appropriate allowance for mark-to-market adjustments to policyholders' assets (net of tax) have been made in PVFP calculations to ensure that the market value of assets is taken into account.
- PVFP is also adjusted for the cost of derivative arrangements in place as at the valuation date.

Cost of Residual Non-Hedgeable Risks (CRNHR)

- The CRNHR is calculated based on a cost of capital approach as the discounted value of an annual charge applied to the projected risk bearing capital for all non-hedgeable risks.
- The risk bearing capital has been calculated based on 99.5 percentile stress events for all non-hedgeable risks over a one-year time horizon. The cost of capital charge applied is 4% per annum. The approach adopted is approximate.
- The stress factors applied in calculating the projected risk capital in the future are based on the latest EU Solvency II directives recalibrated for Indian and Company specific conditions.

Components of VIF (2/2)

Time Value Of Options and Guarantees (TVFOG)

- The TVFOG for participating business is calculated using stochastic simulations which are based on 5,000 stochastic scenarios provided by Moody's Analytics.
- Given that the shareholder payout is likely to be symmetrical for guaranteed non-participating products in both positive and negative scenarios, the TVFOG for these products is taken as zero.
- The cost associated with investment guarantees in the interest sensitive life non-participating products are allowed for in the PVFP calculation and hence an explicit TVFOG allowance has not been calculated.
- For all unit-linked products with investment guarantees, extra statutory reserves have been kept for which no release has been taken in PVFP and hence an explicit TVFOG allowance has not been calculated.

Frictional Cost (FC)

- The FC is calculated as the discounted value of tax on investment returns and dealing costs on assets backing the required capital over the lifetime of the in-force business. Required capital has been set at 170% of the Required Solvency Margin (RSM) which is the internal target level of capital, which is higher than the regulatory minimum requirement of 150%.
- While calculating the FC, the required capital for non-participating products is funded from the shareholders' fund and is not lowered by other sources of funding available such as the excess capital in the participating business (i.e. participating fund estate).

Key Assumptions for the EV and VNB (1/2)

Economic Assumptions

- The EV is calculated using risk free (government bond) spot rate yield curve taken from FBIL¹ as at 30th September 2019. The VNB is calculated using the beginning of respective quarter's risk free yield curve (i.e. 31st March 2019, 30th June 2019 respectively).
- No allowance has been made for liquidity premium because of lack of credible information on liquidity spreads in the Indian market.
- Samples from 30th September 2019 and 31st March 2019 spot rate yield curves used are:

Year	1	2	3	4	5	10	15	20	25	30
Sep 19	5.72%	5.89%	6.09%	6.38%	6.59%	6.96%	7.26%	7.40%	7.30%	7.09%
Mar 19	6.43%	6.56%	6.66%	6.87%	6.99%	7.40%	7.83%	7.78%	7.73%	7.72%
Change	-0.70%	-0.66%	-0.57%	-0.49%	-0.40%	-0.44%	-0.57%	-0.38%	-0.43%	-0.64%

Demographic Assumptions

The lapse and mortality assumptions are approved by Board committee and are set by product line and distribution channel on a best estimate basis, based on the following principles:

- Assumptions are based on last one year experience and expectations of future experience given the likely impact of current and proposed management actions on such assumptions.
- Aims to avoid arbitrary changes, discontinuities and volatility where it can be justified.
- Aims to exclude the impacts of non-recurring factors.

¹ Financial Benchmark India Pvt. Ltd. Investor Release

Key Assumptions for the EV and VNB (2/2)

Expense and Inflation

- Maintenance expenses are based on the recent expense studies performed internally by the Company. The VIF is reduced for the value of any maintenance expense overrun in the future. The overrun represents the excess maintenance expenses expected to be incurred by the Company over the expense loadings assumed in the calculation of PVFP.
- Future CSR related expenses have been taken to be 2% of post tax (risk adjusted) profits emerging each year.
- Expenses denominated in fixed rupee terms are inflated at 6.0% per annum.
- The commission rates are based on the actual commission payable, if any.

Tax

- The corporate tax rate is the effective tax rate post allowing for tax exemption on dividend income for life business and nil for pension business.
- For participating business, the transfers to shareholders resulting from surplus distribution are not taxed as tax is assumed to be deducted before surplus is distributed to policyholders and shareholders.
- Goods and Service tax is assumed to be 18%.
- The mark to market adjustments are also adjusted for tax.
