GlobalSpace Technologies’ DocExa Pro Crosses 20000 User-base
Achieved Significant Milestone within short span of time

Mumbai, August 18, 2020: GlobalSpace Technologies Limited is delighted to update our esteemed stakeholders that DocExa pro has crossed 20000 User-base. DocExa – the first Artificial Intelligence enabled virtual Consultation platform has received quite positive acceptance amongst the Medical fraternity – both from the Pharma Companies and from Doctors as well within a short span of time since its formal launch.

Within this period of epidemic, the platform is gaining significant response in online consultation. The traditional belief that medicine is only practised at the bedside is now undergoing a metamorphosis. As a result, the industry is growing and Company is making inroads in this. The presumption of Doctors that nothing can replace the percussion and stethoscope has been compromised amid this prevailing pandemic across the Globe. With telemedicine gaining ground, even senior physicians are acclimatizing to this virtual reality.

Commenting on this achievement, Mr. Krishna Singh, Founder & CMD said, ‘We at GlobalSpace Technologies are pleased and optimistic for future growth considering increased user-base to sustain this momentum and may accelerate further as the smartphone has become the link to the new patient-Doctor relationship nowadays. The Government of India has also come out with the telemedicine guidelines to provide clarity for the Doctors and even the Registered Medical Practitioner in India to practise virtual consultations with patients. The Telemedicine Guidelines require Doctors to maintain the same standard of care towards a patient during a teleconsultation as they would during an in-person consultation. Moreover, Doctors should identify their patients before consulting, maintain record of every teleconsultation, protect patient’s privacy. Doctor is also supposed to inquire about the age of the patient before issuing a prescription through teleconsultation. We are very proud to say that DocExa is fully compliant with these guidelines and that is helping us in gaining acceptance across the medical fraternity from the Doctors and even the medical associations. This has been a major growth driver for us and we see much faster growth going forward with rising acceptance of DocExa and expected increase in telemedicine practise across the Globe’.
