Soon, Household Survey to Capture Data of Migrants

LOCKDOWN IMPACT Survey to focus on job, income loss suffered by workers after March 24

New Delhi: India will launch a 13-week survey to capture data on migration across the country in major cities and towns as lockdowns and movement restrictions during the pandemic go into effect. The survey will cover all states and union territories to monitor the extent of movement and extent of lockdown impact, sources said.

The survey, to be conducted by the National Sample Survey Organisation (NSSO), will cover 72 cities and towns with a population of more than one million, and other towns with a population of at least 100,000.

The National Sample Survey Organisation (NSSO) and the Economic Survey will prepare a report on the survey findings.

The survey will collect information on employment status, occupation, monthly income, and reasons for migration. It will also gather data on the extent of lockdown impact on the economy, including loss of income, job losses, and other factors.

The survey will be conducted in two phases: the first phase will take place from April 1 to April 30, and the second phase from May 1 to May 31.

The survey data will be used to inform policy decisions and provide insights into the impact of lockdowns on the economy and the lives of people across India.
